at the Sports Facility

A story by Tibor Wilhelm Benedek  
with illustrations by Chen Dongsong & Fang Jinru

The playground looks great ... but I hardly see any teenagers here.

That's true. It works well for small kids, but teenagers need different kinds of activity spaces.

After school, I went straight to the soccer field.

Today, many young people are looking for variety - not just one single sport.

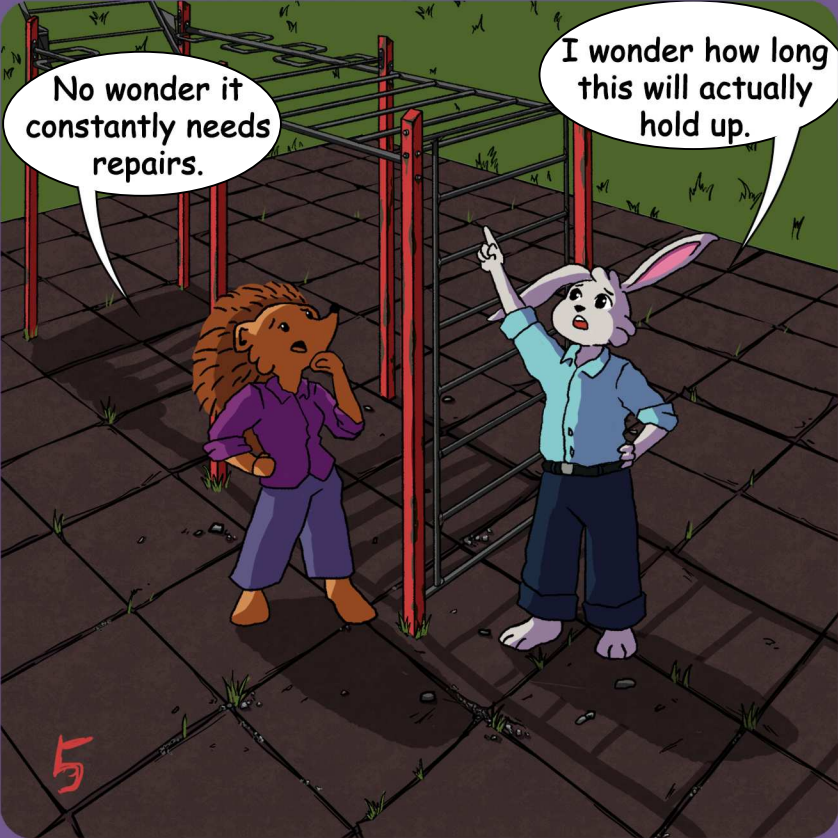

A gym does cover many training needs.

But for many young people it's too expensive. And training among so many adults doesn't always feel comfortable.

Many sports facilities are planned in a very complex way by architects.

And in the end they're expensive, hard to implement, and come with certain risks.

No wonder it constantly needs repairs.

I wonder how long this will actually hold up.

And the surface, with all these puddles and uneven spots, doesn't exactly invite people to work out.

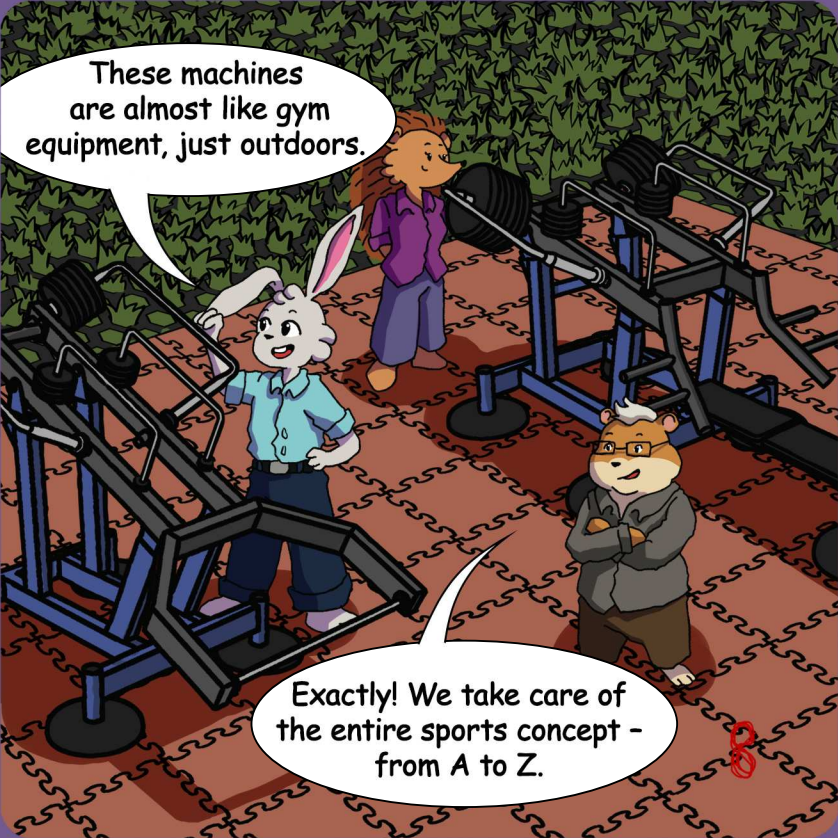

Because of weather and sand, the equipment often doesn't work properly anymore.

6

I think we really need to change something here.

I've heard about an innovative sports concept that combines many different activities

These machines  
are almost like gym  
equipment, just outdoors.

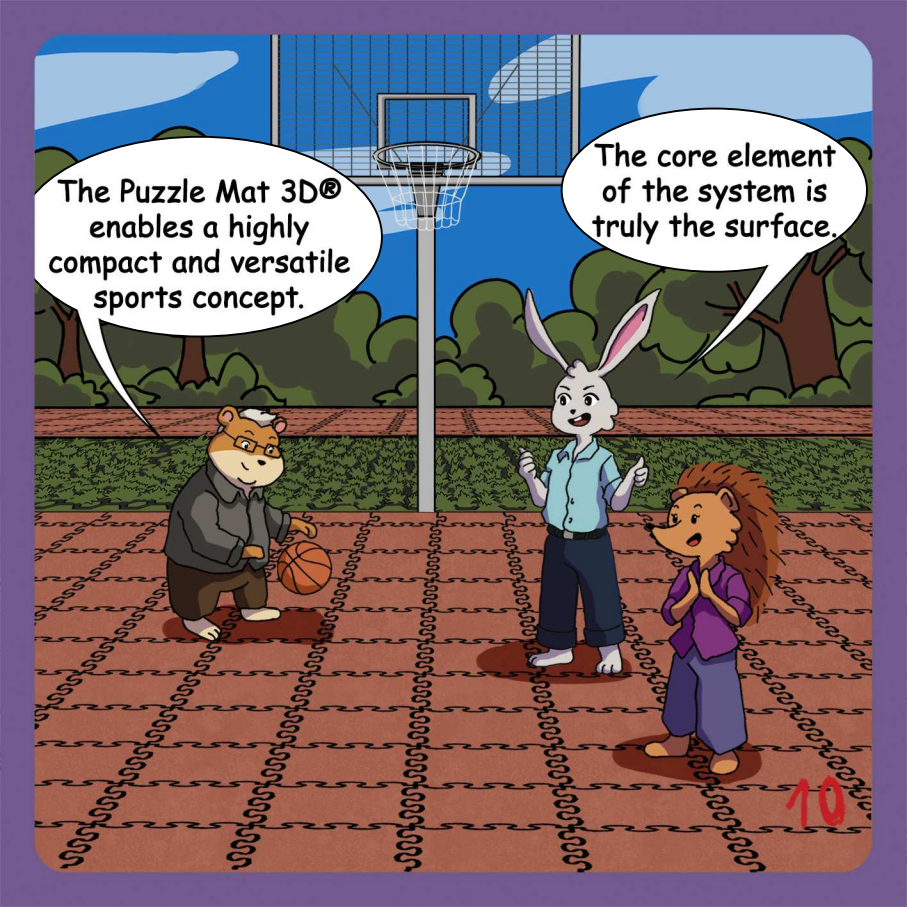

Exactly! We take care of  
the entire sports concept -  
from A to Z.

I really like these weld seams.

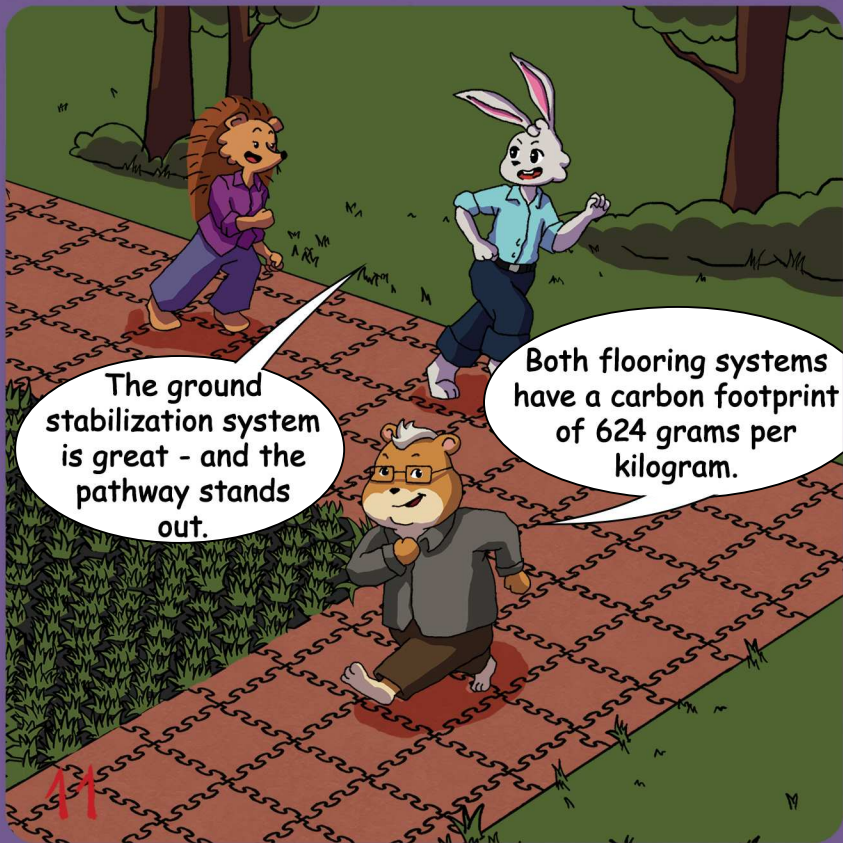

Exactly.

So the coatings and clean workmanship prevent unnecessary follow-up work?

The Puzzle Mat 3D®  
enables a highly  
compact and versatile  
sports concept.

The core element  
of the system is  
truly the surface.

The ground stabilization system is great - and the pathway stands out.

Both flooring systems have a carbon footprint of 624 grams per kilogram.

Is this sports concept available as a complete solution including installation?

Yes. Alternatively, the individual products can be purchased separately under the manufacturers' standard terms.

Thomas and Ilse at the Sports Facility is a promotional story by GUMA-Play Sports Concepts. The modular system of recycled rubber tiles, fitness equipment, calisthenics structures, and ball sport areas provides a solution for innovative activity spaces. Cities and municipalities can create versatile sports offerings while simplifying planning and maintenance. The quality of the equipment, the PM3D surface, and the compact layout reduce effort and risk. The clear system structure and the support provided by our local partners inspired us to present this sports concept in a playful way and offer decision-makers in the public sector a practical source of inspiration.
