Creating Dreams

Products

„A human being only plays when
fully human in the truest sense of the word
and is only fully human when playing.“
- Friedrich Schiller

About spielbau

For more than 30 years, we have been developing and manufacturing high-quality playground equipment in Brandenburg an der Havel – entirely at our company headquarters: from the initial design to delivery. Our international teams combine design, technology and craftsmanship with passion and expertise.

With great attention to detail, we create durable, safe playground equipment that is exported to over 20 countries worldwide. Each play structure is fully pre-assembled at the factory, technically tested and checked to the highest safety standards.

We strive to create unique play experiences through creative design, high play value and well-thought-out solutions that are tailored precisely to the needs of our customers.

In this process, we act in a resource-efficient and responsible manner—using sustainable materials, efficient manufacturing processes and a clear focus on quality, durability and environmental compatibility.

The spielbau-Prozess

From the initial sketch to the finished playground equipment, every step is carried out in one place: at our company headquarters in Brandenburg an der Havel. Here, we develop ideas with passion, rethink play areas and turn visions into concrete concepts. All our teams and trades work closely together – in constant communication, with short distances and a shared commitment to quality and safety.

Selected materials and precise craftsmanship give rise to durable play environments. Wood, HPL, ropes and stainless steel are carefully processed, tested and pre-assembled in the factory before they begin their journey. Modern technology and genuine craftsmanship come together and each surface is given its own individual finish. The result is a well-thought-out process that combines transparency, responsibility and the highest manufacturing quality – all from a single source.

Developing ideas in the Creative Atelier

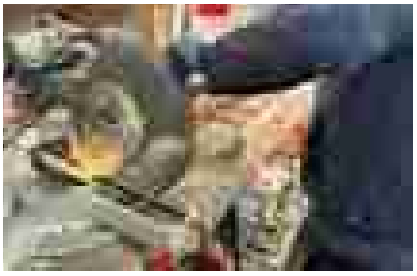

Elaboration in our construction department

Cross-departmental exchange of information

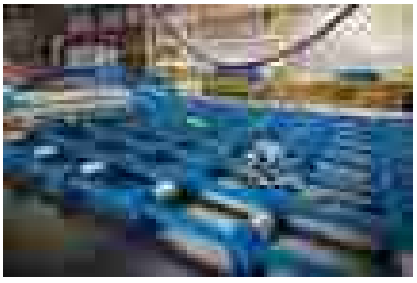

We use PEFC-certified robinia wood ...

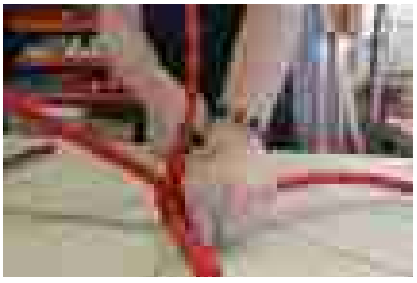

... and get it into shape

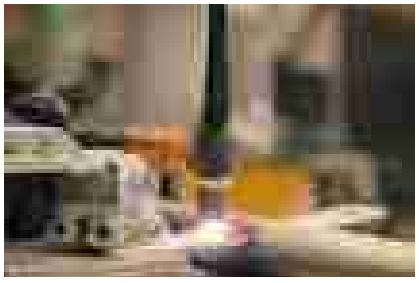

HPL panels are precisely shaped using CNC milling technology

Our ropes are made of durable Hercules rope

Spliced by hand or with aluminium connectors

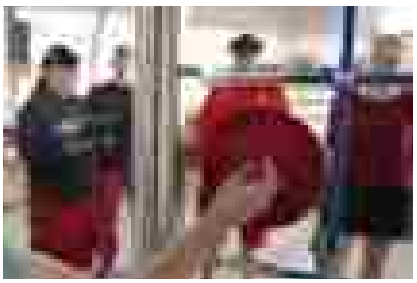

Processing of high quality stainless steel

Our stainless steel slides are also handmade

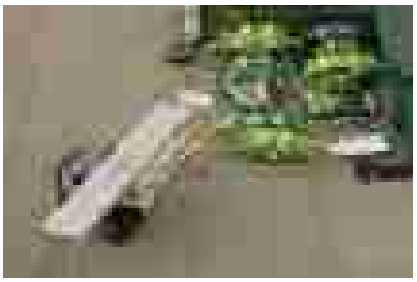

Initial assembly takes place at our company premises ...

... with a detailed saftey check accordng to DIN standards

Stainless steel surfaces get glass bead blasted

Powder coating and finishing as the final step

Ready for transport

From the initial idea to delivery, we provide everything from a single source.

Our philosophy – Where children‘s dreams begin

The team – our greatest strength
Behind every playground structure stands a strong team of more than 120 people: designers, engineers, carpenters, metalworkers and many others. They work hand in hand across departments – with passion, creativity and precision. Together, we bring projects to life in countries all around the world.

Experience you can see
For over 30 years, we have been creating playground worlds that are more than just equipment – they are places full of imagination, connection and movement. Our experience flows into every project and our service supports our customers before, during and long after completion.

Craftsmanship, not mass production
Every project begins with an idea – and becomes something truly unique. We design thematic concepts, combine play value with meaning and develop creations tailored to the customer’s vision and the specific site conditions. Our distinctive design language makes every playground feature a true eye-catcher with unmistakable character.

Safety you can trust
For us, safety is never an afterthought – it is the foundation of everything we build. Several certified playground inspectors oversee each piece of equipment from the initial offer through to the final inspection at our factory. The result: spaces where children can play freely and where parents and supervisors don‘t have to worry.

Passion in every detail
We believe that great playgrounds are born from a love of detail. Our designers and engineers combine smart, practical ideas with innovative solutions that surprise and delight. Every screw, every joint, every material is chosen with care – because small details make the biggest difference.

Quality that lasts for generations
Sustainable materials, robust construction and true craftsmanship – that’s our promise. In our own rope workshop, steel and wood production facilities and surface finishing department, we create playground equipment that is low-maintenance, easy to assemble and built to last. This ensures that play fun is not only guaranteed today, but also tomorrow – and for many years to come.

Everything under one roof
From the first sketch to the final screw – everything is created in-house. Short communication paths, close coordination and concentrated expertise ensure that visions become reliable realities.

Our mission - inspiring imagination
We want to make children’s dreams come true. Our playgrounds are designed to foster development, spark curiosity and inspire creativity. Because play is how children discover the world – and we want to nurture that spirit of discovery everywhere.
True to our motto: Creating Dreams.

spielbau
Creating Dreams

Our passion – your inspiration

Behind every playground we build lies our passion. We don't just create structures – we create worlds where children can laugh, explore and grow. Safe, inspiring and made to last.

We combine creativity with craftsmanship, creating designs that are recognized around the world. Because we believe that play is more than just pastime – it is the beginning of imagination, courage and community.

UN goals at spielbau

Our sustainability strategy is aligned with the UN Sustainable Development Goals (SDGs) and reflects our production- and innovation-oriented corporate profile, which is geared toward resource conservation, efficiency and regional cycles. The key areas of focus are “sustainable industry,” “social working environment,” and “climate-relevant production,” which guide our strategic and operational decisions.

We pursue a combined approach of consistency and efficiency. For us, consistency means continuously developing more environmentally friendly technologies and raw materials and promoting closed cycles throughout the entire product life cycle. Efficiency stands for the responsible use of resources and energy. We combine both approaches through the use of recyclable materials and modern manufacturing and production processes.

In addition, we promote equality and diversity through binding guidelines that firmly anchor inclusion and anti-discrimination within the company.

Learn more about our focus on sustainability in Book #1 “Company“

Our main focus areas of the UN Sustainable Development Goals (SDGs)

7.2
Significantly increase the share of renewable energy globally

8.3
Measures to create jobs and support businesses

10.2
Social, economic and political inclusion

11.3
Inclusive and sustainable urban planning

11.7
Universal access to safe and inclusive green spaces and public places

12.2
Sustainable management and use of natural resources

13.3
Creating awareness and capacity for climate protection

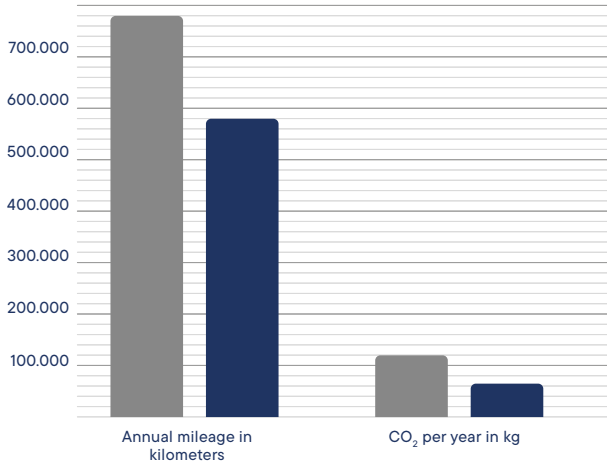

17.17
Formation of effective multi-participant partnerships

Premium materials for long-lasting play worlds

Selecting the right materials is essential for the quality, durability and safety of playgrounds. In our playground equipment, we consistently rely on premium-grade materials. Stainless steel forms the backbone of many of our products: its exceptional stability, weather resistance and low maintenance ensure that climbing towers, slides and structures remain reliable even under heavy use. At the same time, stainless steel allows for elegant, refined forms and precise connections that blend harmoniously into the overall design.

Robinia wood naturally complements these metal constructions. Naturally resistant to fungi and insects, it impresses with its exceptional hardness. As a wood in durability class 1 (very durable, over 25 years), robinia is one of the most resistant woods and is considered the most durable European wood species. Thanks to its natural ingredients, it is particularly suitable for outdoor areas and direct contact with the ground. Therefore, balustrades, platforms and balancing elements made from robinia wood can withstand years of intensive play without losing quality or safety. It also lends a warm, inviting appearance that enhances natural surroundings and appeals to both children and adults alike.

HPL panels complete the material portfolio. They offer versatile design possibilities, withstand UV radiation, moisture and mechanical stress and can be shaped into almost any form. Especially organic shapes – such as curved play surfaces or open book pages – are precisely realized with HPL. These are complemented by Hercules ropes, which create both functional connections and playful climbing or balancing paths.

The combination of these materials enables us to create sophisticated, durable and safe play worlds that meet the highest aesthetic and functional standards. Every element is designed for maximum stability and play value, without compromise in design or experience. The careful selection of materials ensures that children of all ages enjoy diverse opportunities for movement, sensory engagement and cooperation – all with minimal maintenance requirements.

Sustainability and Certified Quality
Our materials and production processes meet the highest environmental and quality standards. The BSFH quality seal guarantees tested safety and superior craftsmanship. With PEFC certification, we verify the sustainable sourcing of our robinia wood. The “Seal of rating for sustainability” documents our conscious use of resources across the entire production chain. Additionally, our playgrounds have been honored with the Brandenburg Environmental Award, recognizing eco-friendly, innovative and long-lasting playground concepts.

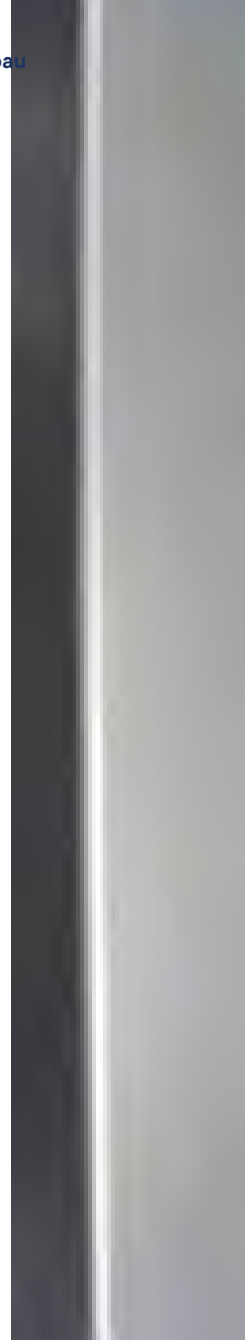

This combination of premium materials, thoughtful engineering and certified sustainability places our playgrounds among the leaders in modern playground design – robust, enduring and crafted to meet the highest expectations for aesthetics, safety and environmental responsibility.

- Impact, scratch and abrasion resistant
- Flame retardant
- Easy to clean
- Made from kraft paper

Hercules rope

- Resilient and robust
- Four or six strands
- Spliced or with aluminum connectors

Colorful and diverse

Colors shape the atmosphere of a playground and have a direct impact on both children and adults. They can convey joy, calm, or excitement – influencing not only aesthetics, but also the overall play experience and quality of stay.
Colors create orientation, support thematic worlds and give every place its unique identity.

To make the design process easier, we have developed four color concepts for our Classic Line equipment, serving as both inspiration and a foundation for your choices.
The result is a harmonious overall image where functionality and color blend seamlessly – turning playgrounds into special places of discovery and experience.

Ocean

Fresh, cool tones with a maritime feel. This concept brings lightness and openness to playground design, creating an inspiring, airy atmosphere.

Sun

Vibrant, luminous colors full of energy and joy. This concept adds striking accents and turns playgrounds into bright focal points that instantly lift the mood.

Nature

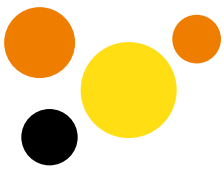

Soft, natural hues that blend harmoniously with greenery and landscape.
Perfect for playgrounds that radiate calm and closeness to nature.

Terra

Warm, earthy colors with a timeless appeal. They lend playgrounds a grounded, welcoming and authentic atmosphere.

Extensive color range

Our color range offers countless possibilities to combine shades and materials – from bold contrasts to harmonious transitions. This allows playgrounds to be designed individually and architectural features to be highlighted with precision. Well-thought-out color combinations give every project its own unique character.

Our high-quality powder coatings are available in a wide variety of tones and can even be produced as gradients with up to four colors. All reference numbers correspond to RAL tones, ensuring easy coordination with planners and architects. This provides the perfect foundation for creative ideas and visually as well as functionally outstanding results.

Inclusion
Accessibility
Sensory experience
Connectivity
Social aspects
Movement experience

Planning for everyone

Inclusion is a fundamental human right and is firmly enshrined in the German Basic Law. With the UN Convention on the Rights of Persons with Disabilities, Germany has committed itself to enabling equal participation for all people – including on playgrounds.

This is where every child should be able to play, discover and have social experiences – regardless of their individual abilities. The new DIN/TS 18034-2 (since 2024) supports this requirement with an evaluation system that classifies playgrounds into three levels of inclusion based on accessibility, diversity and participation.

Inclusion goes far beyond the installation of individual special equipment. An inclusive playground is successful when it enables all children to play together – the aim is to create a play area that is diverse, barrier-free and interconnected.

Our playground concepts are based on the six criteria of the standard: access, connectivity, accessibility, sensory and movement experiences and social aspects. With the two-way and two-sense principle, clear guidance systems and a well thought-out design, we promote inclusion right from the start. Our self-explanatory icons make it easy to see which aspects a products covers, making planning more efficient and transparent.

A comprehensive range of sensory stimuli, opportunities for movement and social interaction not only ensures fun and games, but also genuine participation. The more criteria are met, the higher the playground‘s level of inclusion – from a solid start (level 1) to comprehensive inclusion (level 3). This turns a playground into a shared experience space – for all children.

A successful concept

Our model playground shows how inclusion works in practice: barrier-free access, a wide range of movement options, sensory offerings and communicative spaces create an experience for all children.

DIN/TS 18034-2:2024 provides clear guidance for this by evaluating playgrounds according to accessibility and play options, thus enabling targeted planning. On this model, the playground equipment is arranged in such a way that children can play independently or together, regardless of any limitations.

It is particularly important to combine classic playground equipment with inclusive elements such as sand and water play, tactile surfaces, barrier-free swings and seesaws and communicative offerings. This creates a space where inclusion is not only formally fulfilled, but can also be experienced.

The model playground illustrates that true inclusion is achieved by linking different activities that involve all children equally and encourage them to play together.

Interplay of criteria

A - Barrier-free access

- Access to the playground with the help of the two-way and two-senses principle
- Basic requirement when planning an inclusive playground

B - Connectivity

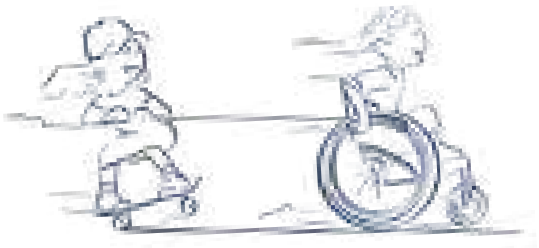

- Access to the play stations in the play area
- Integration into the guidance system and accessibility with the help of the two-way and two-senses principle
- Basic requirement when planning an inclusive playground

Inclusion

C - Accessibility

- Barrier-free accessibility of the playground elements on site and to each other
- Differentiation between “independently usable” and “usable with assistance”
- Integration into the guidance system and accessibility with the help of the two-way and two-senses principle

D - Sensory experiences

- Explicit differentiation between 7 sensory experiences
- Evaluation of play opportunities based on senses addressed
- Seasonal play opportunities must be taken into account

level

E - Experience of movement

- Evaluation of the playground range in relation to 3 movement experiences
- Including perception of speed, height and coordination

F - Social aspects

- Opportunities to come into contact with each other
- Options for communication, perception or opportunities for encounters are being examined

Achieving levels

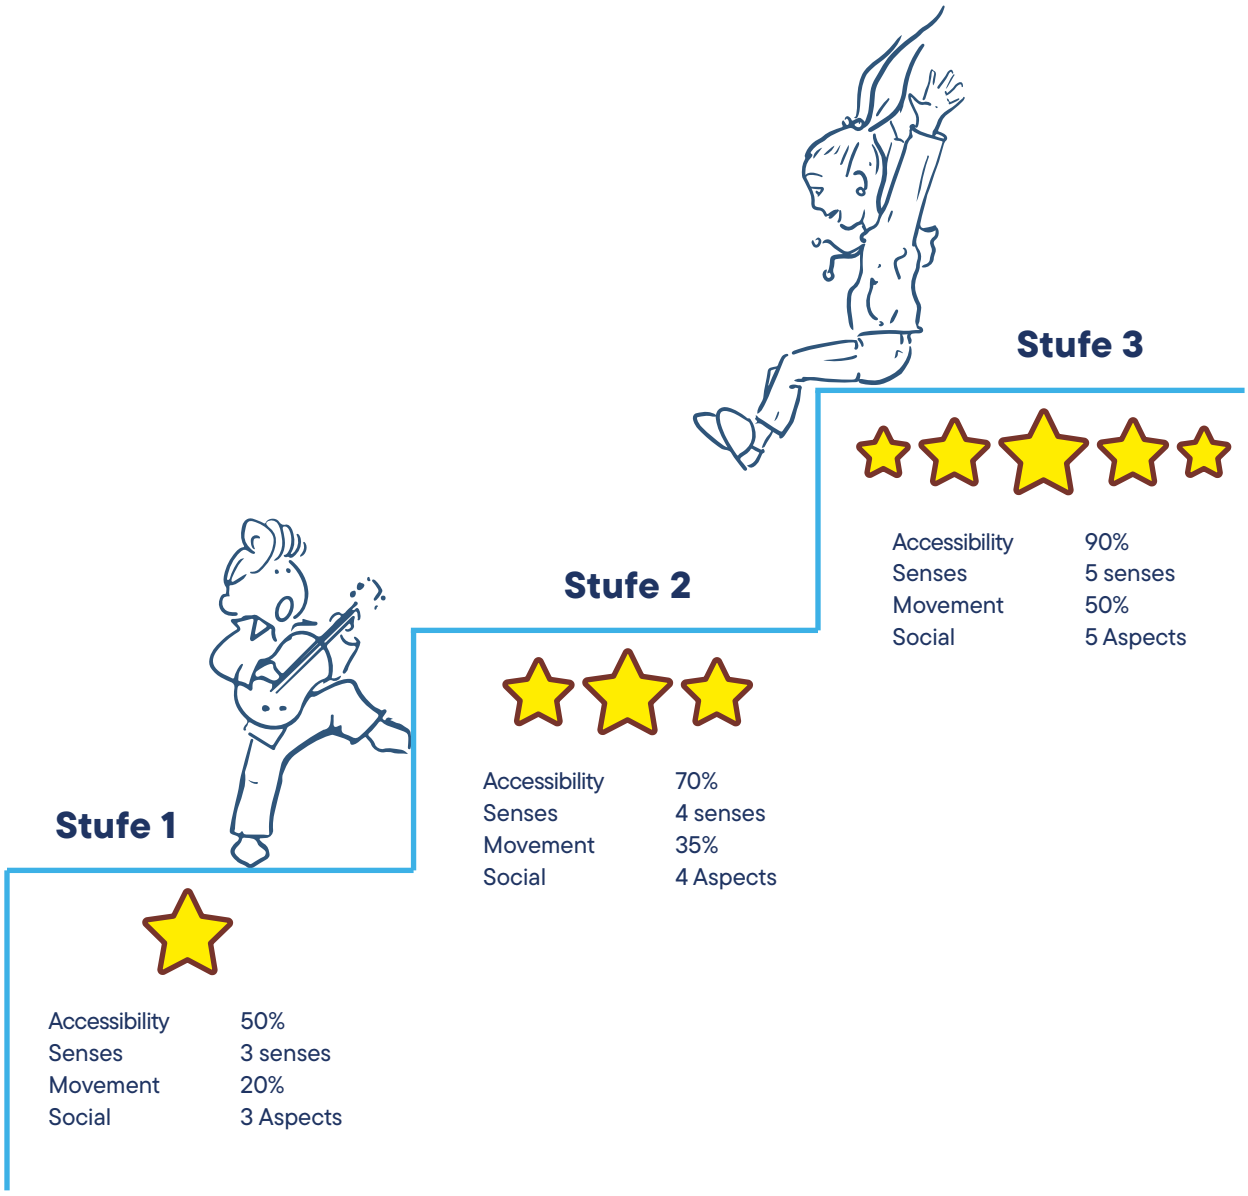

The more criteria met within each category, the higher the inclusion level that can be achieved.

The highest level attained across all categories determines the rating of the entire playground.

To reach any level, conditions in categories A (Barrier-Free Access) and B (Connectivity) must be fulfilled.

A rich combination of sensory and movement experiences, social interaction and accessibility not only ensures long-lasting play value but also supports play for all.

The following icons indicate which aspects are evaluated within each criterion. The more that are achieved, the higher the inclusion level.

Our indicators

These icons show which criteria can be met by each of our playground components.

When combined with other elements, they create diverse play experiences that contribute to achieving the desired inclusion levels.

A - Barrier-free access

Useful data for planning

In addition to names and order numbers, our product catalogues provide you with all the information you need about our playground equipment to help you plan your project.

Our information tables contain details on age groups, space requirements, play values and inclusion-promoting aspects to help you choose the perfect playground equipment.

Order-No.	Product name	Focus	Protection area			Fall height	Height	Play value / Inclusion
			Length	Width	Space			
0000000	Playground Equipment	3+	123 cm	123 cm	123 m²	123 cm	123 cm	
1		2	3	4	5	6	7	8 9

1 - Order number and product name

As part of our extensive digitisation and optimisation process, our most popular products have been given new, coordinated product names and individual order numbers. This information enables us to provide you with product information, documentation and quotations quickly and easily.

2 - Focus group

We stand for inclusion rather than exclusion, because our goal is to create playgrounds that offer something for everyone. For this reason, we do not strictly separate age groups and instead refer to focus groups – i.e. developmental stages of children for whom the respective playground equipment was designed. This information is intended as a recommendation and does not represent barriers based on numbers. Some of our products are not accessible to small children due to access filters and restrictions in accordance with DIN EN 1176 – but children develop differently and, in compliance with the standard, our playground equipment offers fun for every stage of development.

3 - Length of the protective area

This specification refers to the length of the area required for the playground equipment, including the minimum fall zone to be complied in accordance with DIN EN 1176. This is a guideline value that may vary depending on adjustments to the DIN standard or technical changes. We recommend that you always request a current quote with product information during the planning phase.

4 - Width of the protective area

This specification refers to the width of the area required for the playground equipment, including the minimum fall zone to be complied in accordance with DIN EN 1176. This is a guideline value that may vary depending on adjustments to the DIN standard or technical changes. We recommend that you always request a current quote with product information during the planning phase.

5 - Needed space

The area to be planned for the playground equipment in square metres. This is a guideline value that may vary depending on adjustments to the DIN standard or technical changes. We recommend that you always request a current quote with product information during the planning phase.

6 - Max. free fall height

Maximum free fall height for this playground equipment.

7 - Height

Refers to the maximum height of the playground equipment, not the platform height.
The platform heights of the playground equipment can be found on our data sheets.

8 - Play values

The most important goal of a piece of playground equipment is to combine fun and variety. With our information on the various play values, you will always find exactly the combination that children love:

9 - Inclusion

Fun for everyone is an important and essential principle in the planning of play areas. Each of our products promotes certain aspects of inclusion, which, when combined, create a play experience that offers everyone a space for discovery and excitement. These pictograms help you to use exactly the aspects of inclusion to develop your project into a play area that makes diversity visible and tangible. A list of all aspects of inclusion and achievable levels can be found on pages 18 to 21.
As sections A to C do not relate to individual play equipment but to play stations or the entire play area, fulfilment of these criteria is considered a basic requirement when planning.

Discover play worlds

Our themed play worlds feature thoughtfully designed combinations that are perfectly tailored to the environment and user group. Discover inspiring concepts, impressive designs and harmonious complete solutions that transform play areas into real places of discovery – and get fresh ideas for your next project.

Play value to the max!

Play Houses Design Line

Our Play Houses are small hiding places, role-play rooms and worlds of discovery all in one. They combine playful design with functional architecture and can be combined in a variety of ways in terms of size, shape and material – for maximum imagination in a minimum of space.

Play Houses Design Line

Whether as a single hut or a small playhouse village, our Play Houses invite children to hide, communicate and engage in creative role play. Thanks to their compact design, they offer a wide range of play options even in limited spaces and are ideal as retreats or themed worlds of adventure. Combining different types of Play Houses allows for exciting layouts, from simple little houses to complex, winding play landscapes.

Our experienced designers specifically integrate movement, sensory and social play aspects. Typical design elements such as gables, windows, coloured acrylic glass and varied materials such as stainless steel, robinia wood and HPL create not only inviting but also particularly durable play areas with a high recognition value.

Here, children can immerse themselves into nature in a playful way. Organically designed elements blend harmoniously into the environment, creating space for movement, sensory experiences and imagination.

GrasArt Design Line

Playing outdoors is not only healthy, it also promotes children‘s development. With our GrasArt design line, ‘playing in the grass’ is taken literally. The colour scheme, curvature and slanted cut of the posts imitate the appearance of blades of grass and blend almost seamlessly into the natural environment.

In combination with many play values, transparent or hut-like constructions and playful applications, movement spaces are created that promote sensorimotor development and stimulate children‘s imagination at the same time. Discover the playful green world of our GrasArt products, where children can experience their surroundings from a different perspective.

Climbing in the grass

Casita in Brandenburg/Havel

As individual as your project

Our GrasArt products do not only stand for imaginative design and natural integration, but also for maximum adaptability to your wishes and requirements. Every project is unique – that's why we offer you a wide range of customisation options: you determine the colour scheme yourself and can even create flowing colour gradients with up to four shades if required. This creates a harmonious interplay with your surroundings – whether in an urban park landscape, a natural play area or a thematically designed space.

In addition, we can adapt the playground equipment to your overall concept in terms of design and functionality in close consultation with you – from the selection of individual play elements to integration into existing plans. Our experience and your creative freedom complement each other perfectly. We look forward to working with you to bring your project to life – creatively, thoughtfully and individually. Feel free to contact us – we are looking forward to work with you bringing your project to life.

GrasArt rooftop playground in Nuremberg

Multicolored posts

Our colored stainless steel posts take up the idea of „playing in the grass“ and translate it into a child-friendly, nature-inspired design.

Each stainless steel post is powder-coated in a shade of green, with the colors deliberately alternating from our diverse range of greens. This creates subtle contrasts and lively variety without detracting from the overall calm effect.

For children, climbing feels like they have become tiny and are playing among tall blades of grass. This visual diversity promotes perception, stimulates the imagination and creates an environment that invites discovery.

At the same time, the clear color areas support orientation, structure and a harmonious play experience.

Color Gradients

Our color gradients give the stainless steel posts of our GrasArt products a special vibrancy.

Each post can be powder-coated from top to bottom with up to four harmoniously coordinated shades of green. This creates the impression of light, growth and movement—just like real grass.

This opens up an additional sensory experience for children: color gradients promote visual understanding, train transitions and encourage close observation. While playing, climbing and exploring, children immerse themselves in an imaginative natural landscape that supports creativity and free play.

The combination of movement, perception and imagination in a coherent, natural design is pedagogically valuable.

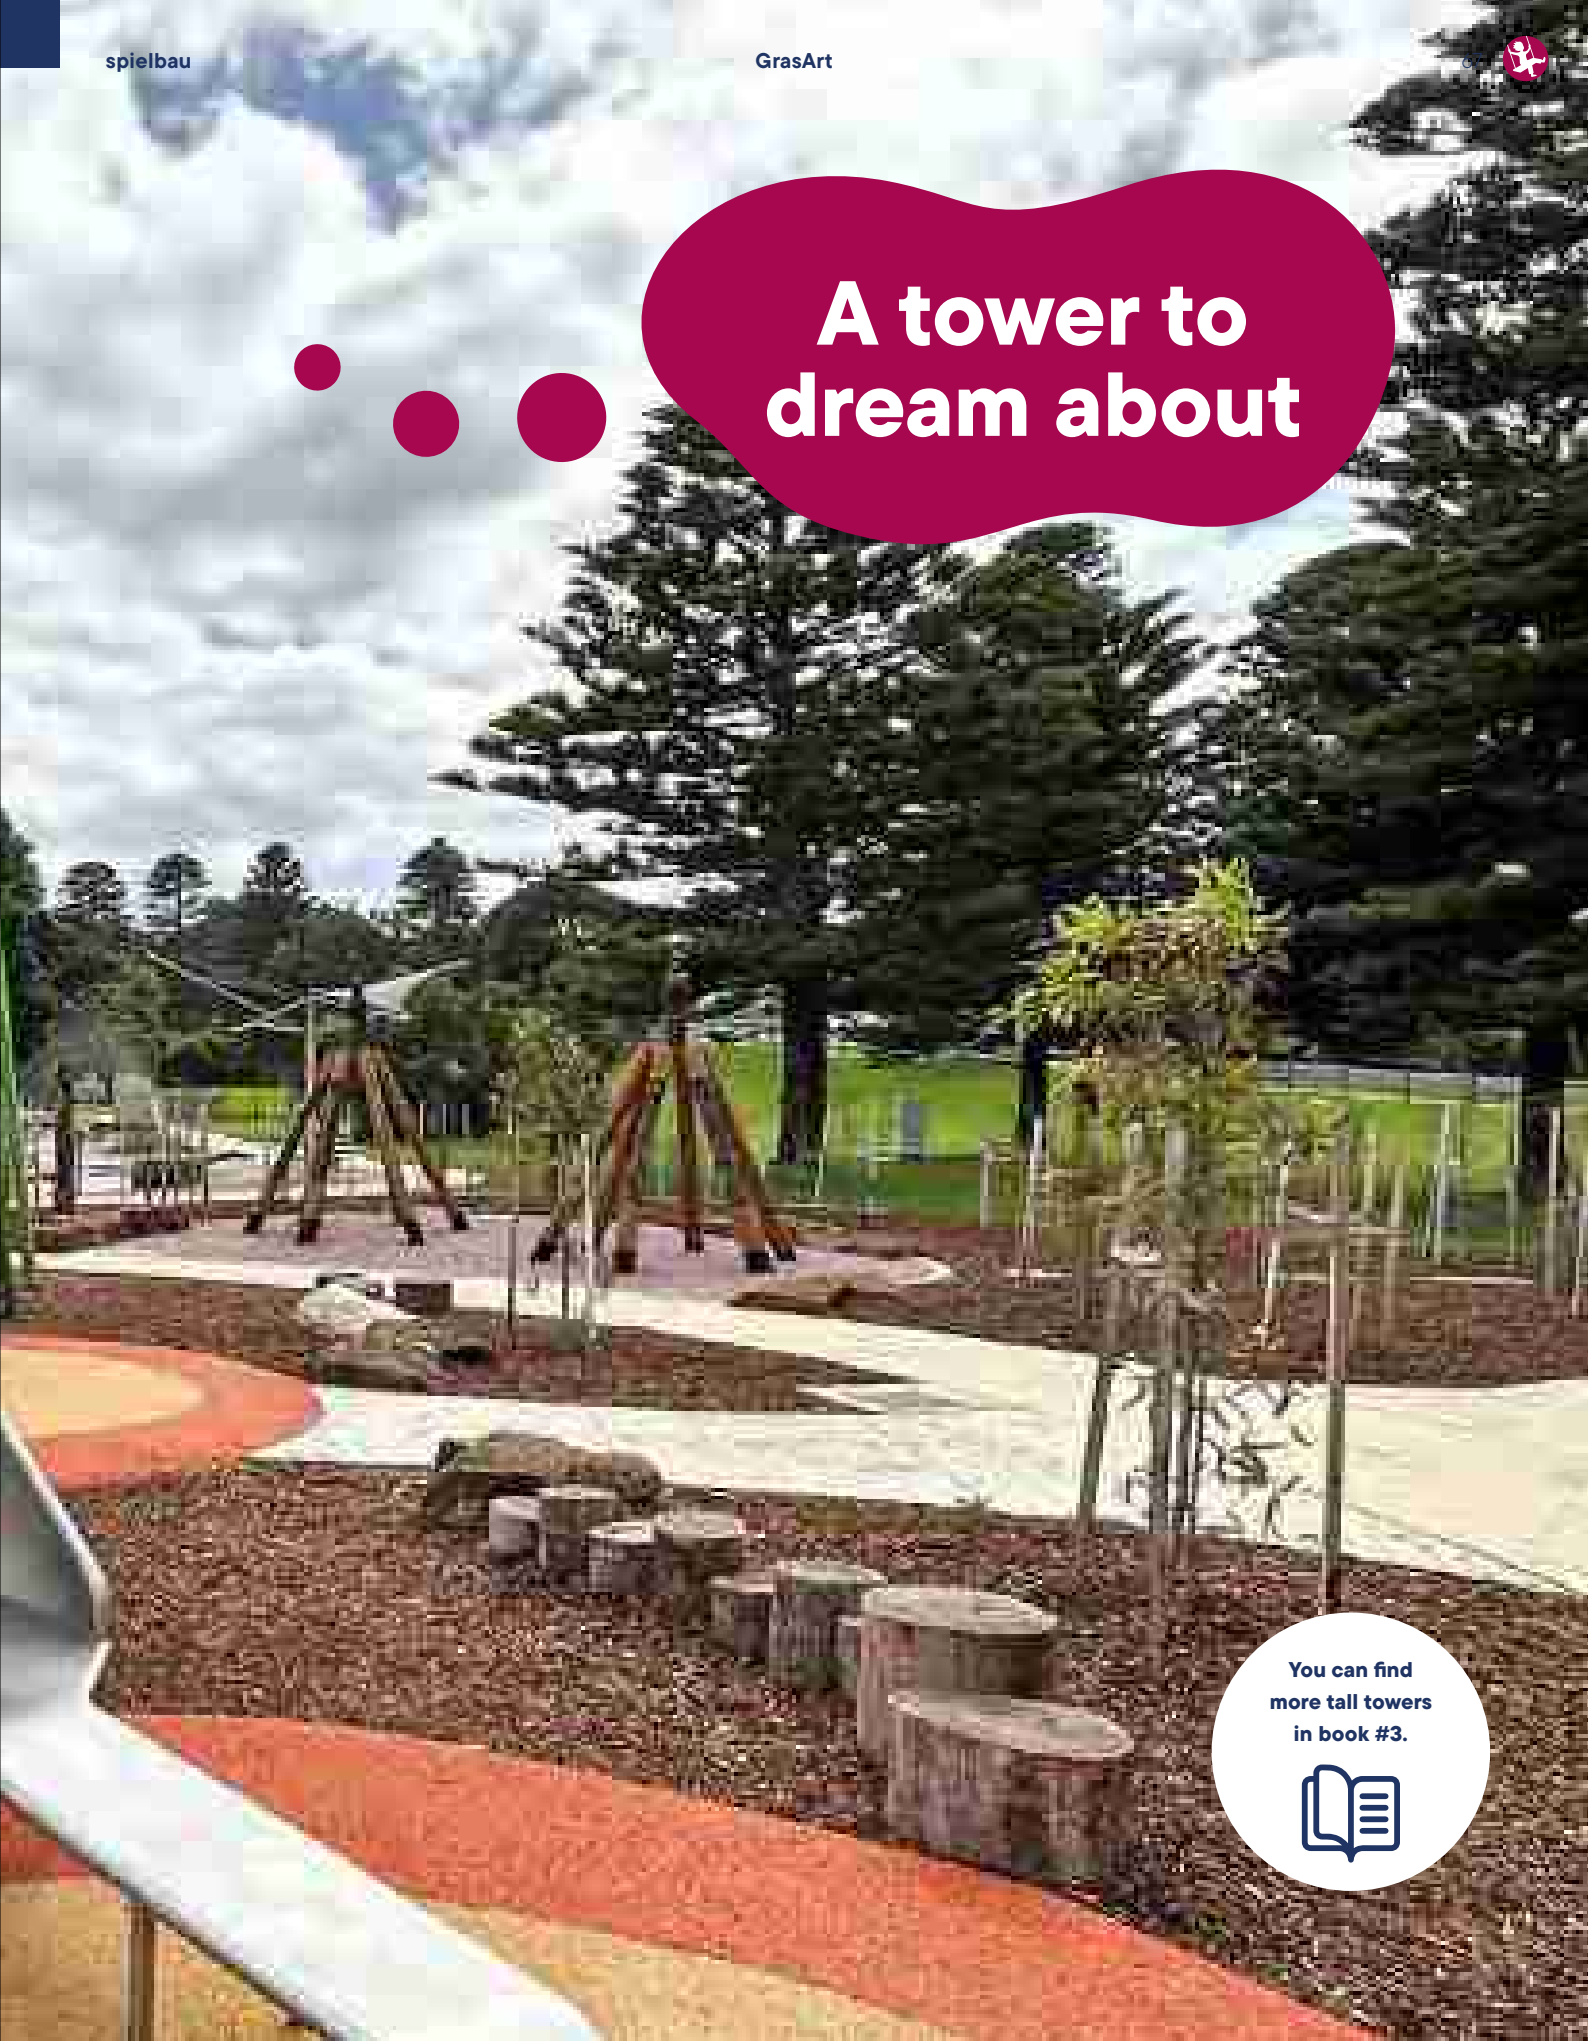

Combine your desired colors with up to 4 shades.

Layers Pertobe in Australia

A tower to dream about

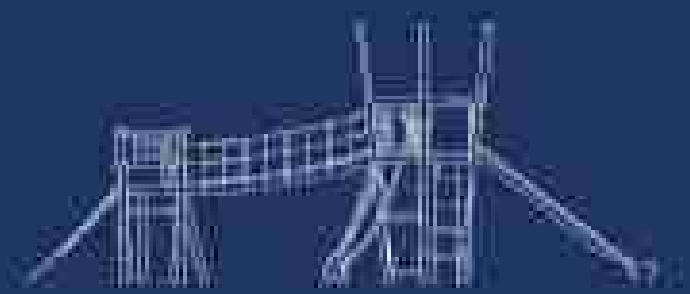

You can find more tall towers in book #3.

The timeless classic

Mikado Design Line

Our successful Mikado series is inspired by the world-famous and beloved children's game of the same name. This unique design is characterised by inclined posts that create a colourful and playful pattern.

Mikadoanlage in Berlin

Mikado Design Line

Our diverse range of playground equipment opens up countless design possibilities and blends harmoniously into any environment. Be inspired by the creativity and fun of our Mikado series! Each of our play structures is made from high-quality, durable materials that ensure safety and long-lasting fun.

The bright colours and unusual shapes magically attract children and playfully promote their motor skills. Whether in parks, schools or residential areas, the Mikado series brings joy and movement to every corner. Experience how children‘s hearts beat faster and playgrounds are transformed into true worlds of adventure.

Mikado Construction A in Brandenburg

Modular and customizable

The products from our Mikado series are based on a sophisticated modular design that offers maximum design freedom. Thanks to the modular construction, add-on parts can be selected specifically, combinations and towers can be supplemented with additional elements, or complete constructions can be individually configured. This results in a solution that is precisely tailored to the requirements of your project.

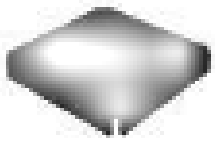

Whether you have special space constraints, specific usage requirements or a completely individual concept, the modular Mikado series enables tailor-made systems with a unique character.
We would be happy to assist you personally: our experienced planning experts will provide you with comprehensive advice and work with you to develop a tailor-made solution that is optimally suited to your project.

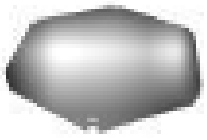

We‘re happy
to advise you
on your project.

One product, many possibilities

Our playground equipments offer exceptional design flexibility. The Mikado design line is not limited to typical segmented colour schemes, but can be individually tailored to each project. High-quality powder coatings open up a wide range of colour concepts – subtle, contrasting or deliberately unusual. This means that the same products can have a completely different effect depending on the environment, target group or design idea. The design language remains familiar, but the aesthetics are reinterpreted. This results in solutions that blend harmoniously into existing concepts or create specific accents.

In addition, structural adjustments offer further design options. Different post lengths change the proportions and visual presence of the system, while alternative post types – such as our curved GrasArt posts – give the product its own unique character. Without a complete redesign, new shapes, dynamics and expressions are created. These targeted adjustments create space for individual ideas and enable proven concepts to be tailored precisely to your project. We would be happy to advise you personally and show you how the Mikado series can be used to create flexible, unique solutions – tailored precisely to your requirements and your design vision.

Our classic - Mikado Construction A with segment-by-segment color design.

Stainless steel posts in GrasArt design with natural green tones - also available in color gradients.

Colorful design and posts in different lengths add variety.

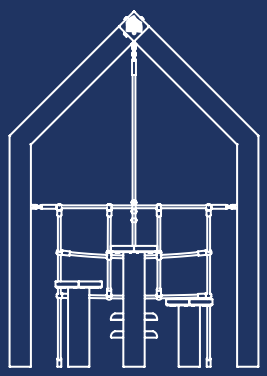

Addition of the hexagonal roof and use of color schemes for thematic areas.

The stylish houses

Frame Design Line

Clear shapes, strong colours and a concept that completely rethinks play areas – this is our Frame line. A versatile play world that combines architectural aesthetics with maximum play value.

Clear structures

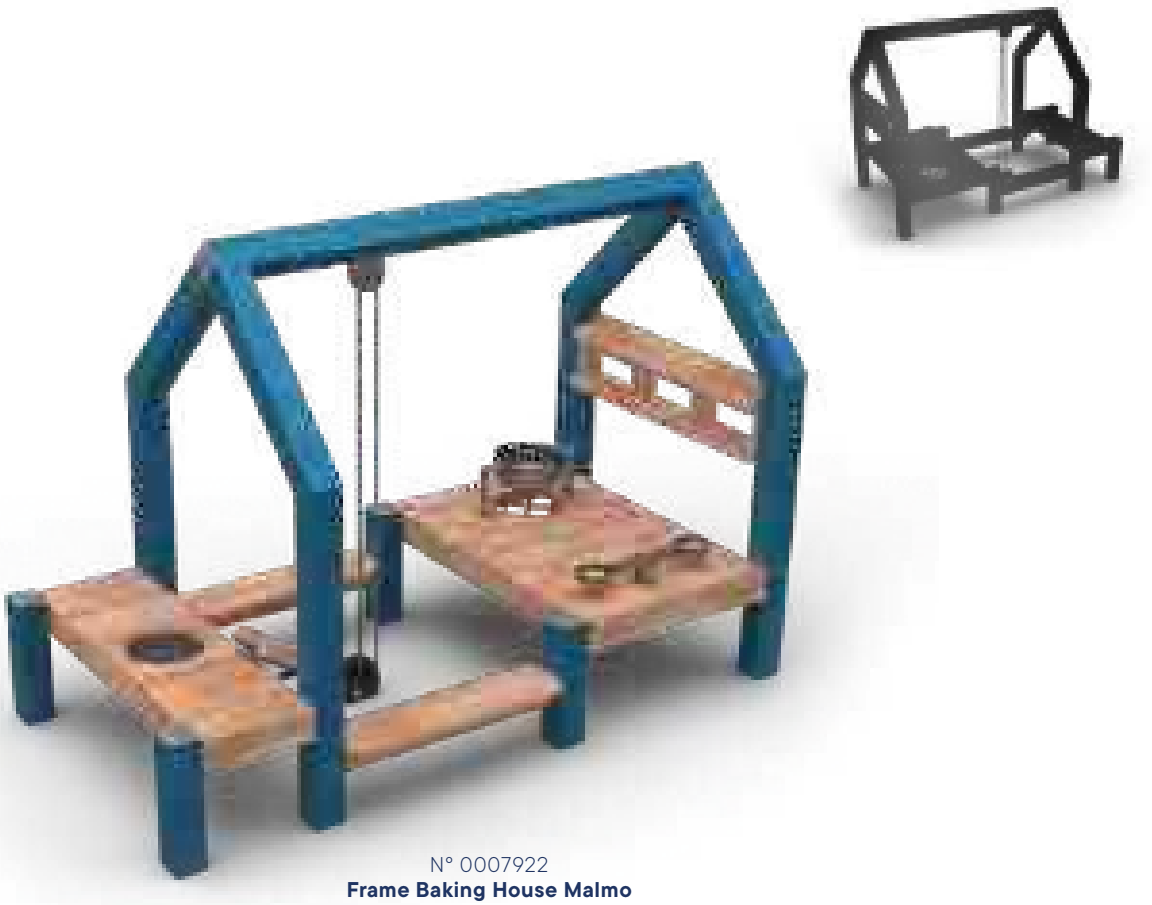

Frame playground in Potsdam

Frame Design Line

The basic idea behind our Frame design line is as simple as it is effective: inspired by the archetypal house shape, geometric structures create inviting spaces for movement, encounters and adventure. The ‘frame’ serves as an open stage for a wide variety of play and climbing elements.

With its modular design, the system adapts flexibly to any environment and any project – from individual, striking playhouses to entire adventure villages. The powerful colour scheme and well-thought-out play values not only create visual highlights, but also immediately arouse the curiosity of children.

Discover Ninja Frame

The Ninja Frame series brings action and challenge to any play or training environment. With its dynamic climbing passages, it demands skill, strength and endurance – whether alone, in a team or in competition. Each element is designed to enable exciting movements and inspire ambition. Players experience a real sense of adventure reminiscent of the spectacular courses seen on popular TV shows.

Thanks to the modular design, the elements can be combined individually to create courses of varying degrees of difficulty. Short or long sequences, straight paths or challenging obstacles – everything can be put together exactly as desired. This creates a unique experience for different age groups. Ninja Frame combines athletic challenge with creative freedom and invites players to enjoy new and exciting rounds time and time again.

Climbing as competition

Thanks to their modular design, climbing elements can be combined individually.

Various shapes and arrangements can be tailored precisely to your needs.

Whether competing against each other or against the clock, Ninja Frame brings fun competition!

You can find the Ninja Frame Line in book #3.

For the little ones

Kobito Design Line

Playful arches and a combination of materials invite toddlers to develop through play. With easy climbing and plenty of space to explore, Kobito offers an imaginative opportunity for younger children to develop.

Kobito Design Line

We designed the Kobito product line to promote the development of young children through play. ‘Kobito’ (a Japanese word for ‘the little ones’) is inspired by cute villages and small dwellings.

The combination of arches made of high-quality stainless steel with different elements made of HPL and robinia wood invites children into a world of play that stimulates their imagination, creativity and encourages them to rediscover this world again and again.

Rediscover the classics

Classic Design Line

Playhouses, towers and play structures that combine tradition with imaginative details. Modular, colourful and varied – perfect for children of all ages who want to explore, play and express their creativity.

Classic Design Line

Our Classic design line combines tried-and-tested classics with modern play ideas. From playhouses and towers to a wide range of play structures, the products offer varied opportunities for interaction and role play for children of different age groups. Small details and playful colours stimulate the imagination and encourage creative play.

Thanks to their modular design, towers and play structures can be flexibly expanded or individually redesigned – from replacing individual modules to completely redesigning the entire structure. Pedagogically designed play values promote movement, social interaction and independent discovery. This creates a play environment that constantly challenges and inspires children.

Variety for schools and daycare

Our Classic line is based on a well-designed modular system that offers maximum design freedom. Individual climbing modules, platforms, roofs and play elements can be flexibly combined with each other and adapted to new requirements. This results in play structures that are precisely tailored to the available space, budget and desired age group.

The clear structure of the modules ensures planning reliability, easy assembly and sustainable use.

The Classic line combines timeless playground classics with a flexible concept that offers individuality, cost-effectiveness and educational added value.

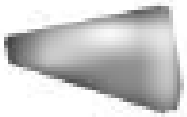

We‘re happy
to advise you
on your project.

Maximum design

Colours play a central role in the perception and effect of a playground. In our Classic design line, colour nuances are used specifically to create orientation, stimulate play and spark children's imaginations. Small accents and finely tuned details give the playground equipment character without overloading it. This creates play areas that appear lively and at the same time radiate calm.

Harmonious colour combinations promote comfort and support a coherent overall picture in the play environment. They help to visually integrate playground equipment into their surroundings and clearly structure different play areas. Our four carefully developed colour schemes offer reliable orientation and make it easier to select suitable combinations – for individually designed playgrounds with a balanced colour effect.

Ocean

Fresh, cool tones with a maritime feel. This concept brings lightness and openness to playground design, creating an inspiring, airy atmosphere.

Sun

Vibrant, luminous colors full of energy and joy. This concept adds striking accents and turns playgrounds into bright focal points that instantly lift the mood.

Nature

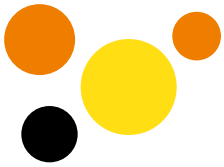

Soft, natural hues that blend harmoniously with greenery and landscape.
Perfect for playgrounds that radiate calm and closeness to nature.

Terra

Warm, earthy colors with a timeless appeal. They lend playgrounds a grounded, welcoming and authentic atmosphere.

Play Combi Arthus in Schwerin

Welcome to the secret hideout

Tree Houses Line

High up into adventure! Our tree houses transform any play area into a lively world of adventure full of imagination, security and natural charm – a favourite place for little explorers.

Tree Houses Line

Our tree houses combine natural design with well-thought-out play architecture. Elevated, they open up new perspectives and create a feeling of security and adventure at the same time. Walls made of robust robinia wood convey warmth and naturalness, while optional HPL roofs offer reliable protection. The result is durable play areas that blend harmoniously into any environment.

Here, children can retreat, engage in role play and socialise in a special way. The elevated position boosts self-confidence and physical coordination, while playing in a house-shaped structure encourages imagination and social skills. Whether as a secret meeting place, observation tower or cosy home in the countryside, tree houses offer a wide range of opportunities for lively, creative and educational play.

Set sail into play

Maritime Line

Hands on deck for great adventures! Our Maritime design line transforms playrooms into lively harbour worlds – with ships, lighthouses and movable elements for courageous explorers.

Maritime Line

Our Maritime line creates imaginative harbour and seafaring worlds. From small play ships to impressive tall ships, there are endless opportunities for climbing, sliding and discovering. Climbable lighthouses add striking accents and promote motor skills, while additions such as climbing barrels or play rafts create additional incentives for movement. This creates varied play areas with a high level of appeal.

Children slip into roles as captains, sailors or harbour crew and experience dynamic play together. Different levels, ascents and descents strengthen coordination, balance and self-confidence. At the same time, the clear theme worlds encourage creative stories and social interaction. The Maritime design line combines movement, adventure and role play into a holistic, educationally valuable play experience.

Playing with the elements

Sand & Water Play

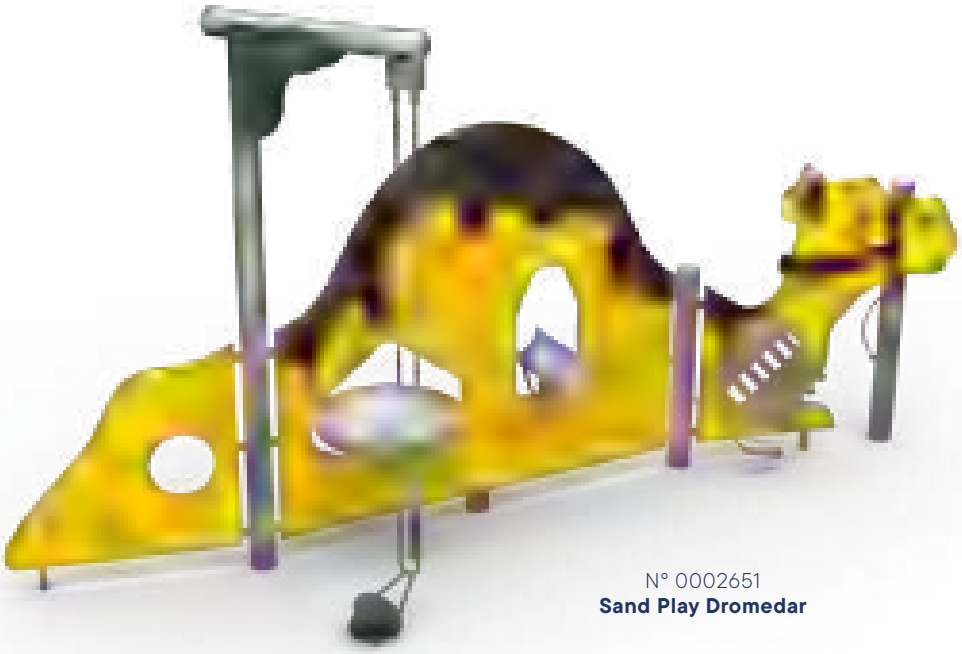

Understanding the world with sand and water: our play modules open up creative spaces where children can explore, design and create unforgettable moments with natural elements.

Sand & Water Line

Our sand and water play range combines individual modules to create flexible play areas. Elements can be combined individually and rearranged to your wishes. In addition, there are ready-made, themed playground concepts that invite children to explore. This creates versatile play areas where sand trickles, water flows and children experience nature with their senses.

Playing with sand and water promotes creativity, fine motor skills and an initial understanding of science. Children experiment with quantities, shapes and movements, build landscapes or direct watercourses. Planning and designing together strengthens social skills and communication. Our products create inspiring spaces where free exploration, imaginative role play and sustainable development impulses come together harmoniously.

Mud Table Inclusion in Muenster

Naturally appealing

Lucy Product Line

**Playful, lively, distinctive:
our Lucy design series inspires with
imaginative climbing combinations
and swings – crowned with cheerful flower
appliqués as a charming trademark.**

Lucy Product Line

Our Lucy series combines varied climbing combinations and swings to create lively play areas with high recognition value. Characteristic floral appliqués add cheerful accents and immediately appeal to children. Whether with elegant stainless steel posts or natural robinia wood, the products impress with their stability, durability and harmonious design that blends into different environments.

Children experience movement in its most beautiful form: climbing, swinging, balancing and laughing together. Different heights and challenges promote strength, coordination and self-confidence. At the same time, the playful details stimulate imagination and role play. ‘Lucy’ creates places where motor development, social interaction and aesthetic experience come together in an inspiring way.

Relaxation and quality of stay

Road And Park Equipment

Creating gathering places that connect and inspire: our road an park equipment invites people to linger, discover and get creative — robust, well thought-out and designed for all generations.

Road And Park Equipment

Outdoor spaces are more than just functional areas – they are meeting places, retreats and adventure zones all at once.
Our road and park equipment elements create inviting lounge areas with seating groups, benches, tables and lounging beams that bring people of all ages together. Clear design, durable materials and robust construction ensure lasting quality in public spaces. At the same time, a wide range of designs allow for harmonious integration into different environments – from natural green spaces to lively play areas.

Additional elements open up playful spaces for children in particular. They promote perception, creativity and communication and invite joint discovery and experimentation. Low-threshold stimuli create situations that arouse curiosity and strengthen social interaction. In this way, quality of stay and educational added value combine to create holistically designed outdoor areas with a lasting impact for all generations.

Shade and interaction

Pavilions

Protected meeting places with added value: our pavilions offer sun protection and plenty of space for people to meet and chat — modular in design and customizable to suit your needs.

Pavilions and sun protection

Our pavilions create covered areas that offer protection while maintaining an open feel. They serve as meeting places, retreats and communication hubs for children, families and especially teenagers. Whether in schoolyards, on playgrounds or leisure facilities, they structure outdoor areas and enhance the quality of the space by providing reliable protection from the sun and weather. Clear shapes, durable materials and robust construction ensure lasting stability in public spaces.

Thanks to their sophisticated modular design, our pavilions can be individually configured and adapted to different requirements. Size, equipment and details can be flexibly combined to create unique solutions. Optional integrated solar-powered charging stations provide additional benefits and appeal particularly to young people. The result is modern meeting places that combine functionality, sustainability and creative freedom.

Hexagon sun roof elements can be combinaed according to your wishes.

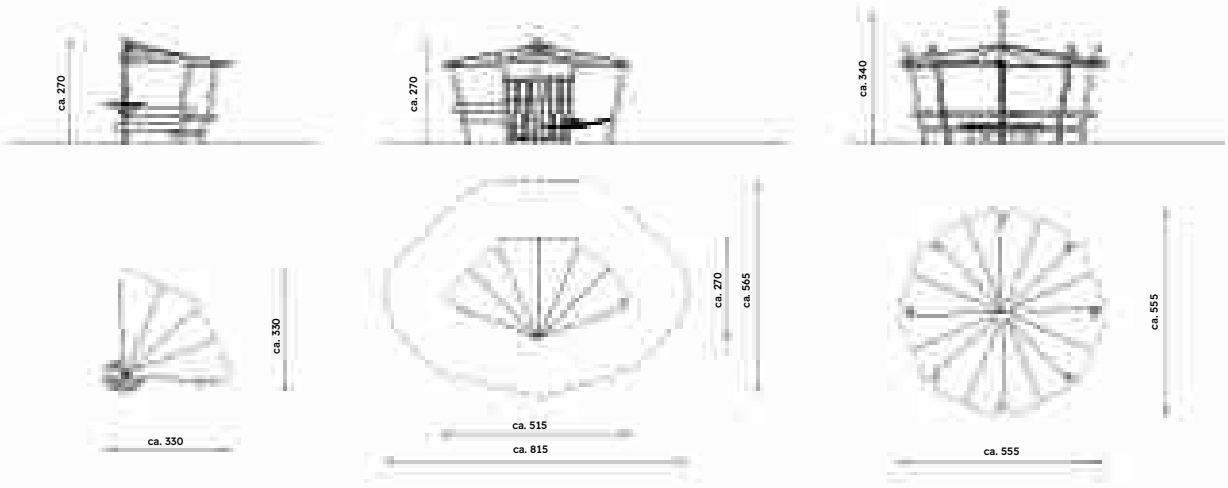

Tailored to your needs

Our pavilions offer maximum design freedom and sophisticated modularity. Individual modules are used to create a customised meeting place that is optimally adapted to the available space, architectural conditions and educational requirements. Size, basic shape and equipment can be flexibly combined to create both small retreats and spacious meeting areas. The result is a protected space that provides structure and conveys openness at the same time.

Seating, tables and integrated play elements can be added and rearranged as required. This makes the pavilion a versatile place for exchange, group work or relaxed breaks in the shade. On request, the system can be expanded to include a charging station with a solar module – a contemporary solution that combines sustainability and comfort. The result is a lively centrepiece that harmoniously combines functionality, quality of stay and individual design.

Depending on the number and combination of modules, different basic shapes and sizes are possible.

Combinable pavilion modules

Single roof segment
A central support post is required to assemble a pavilion.

Bench

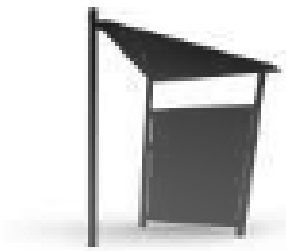

Bench Without Backrest

When height meets speed

Stainless Steel Slides

Exercise, adventure, and children's eyes lighting up with joy—our high-quality stainless steel slides combine safety, quality and innovative fun on every playground.

Stainless Steel Slides

Slides are among the most popular pieces of playground equipment—they foster courage, coordination, and body awareness in a playful way. Our slides are manufactured in-house from high-quality stainless steel and are synonymous with durability, safety, and timeless design. Whether freestanding or attached, curved or box-shaped or in various widths and heights: we have exactly the right slide for your playground design.

The smooth, robust surface ensures optimal sliding performance and high play comfort—even with intensive use. Especially on warm days, our **innova-tive slide cooling system** ensures pleasantly tempered sliding surfaces. Different heights, platform solutions, and variations create diverse experiences and continually invite children to embark on new movement adventures. This sustainably strengthens motor skills, balance, and self-confidence—with every slide.

World first: our cooled slide

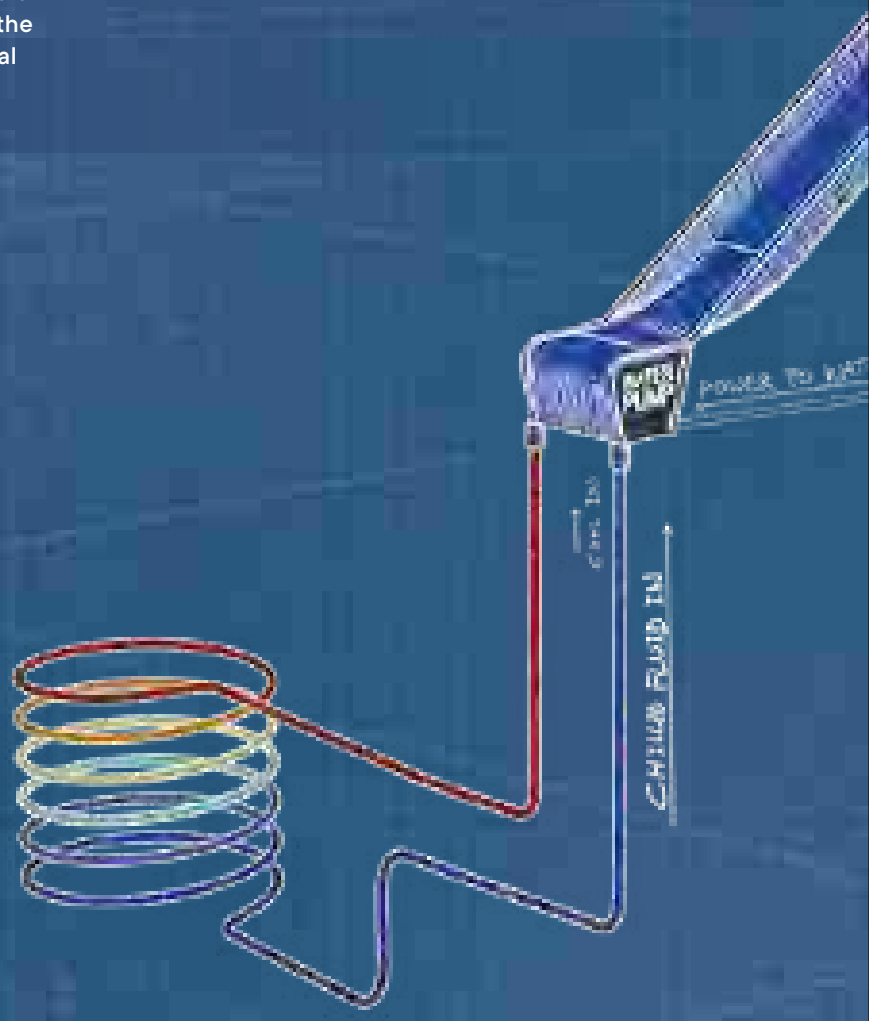

On sunny days, stainless-steel slides can quickly become a challenge: their surfaces can heat up to as much as 63 °C – and sliding already becomes uncomfortable from 39 °C. To guarantee fun and safety even in midsummer, we have developed an innovative, solar-powered water-cooling system. It selectively regulates the temperature of the lower section of the slide, ensuring pleasantly cool surfaces – sustainable, resource-efficient and completely independent of external energy sources.

The cooling module is compatible with our spielbau box slides and provides cooling depending on platform height: at 60 cm, the entire surface is cooled, while at 150 cm, the lower 130 cm are reliably temperature-controlled. Thanks to the closed-loop system, it operates with exceptional efficiency and is frost-proof in winter.

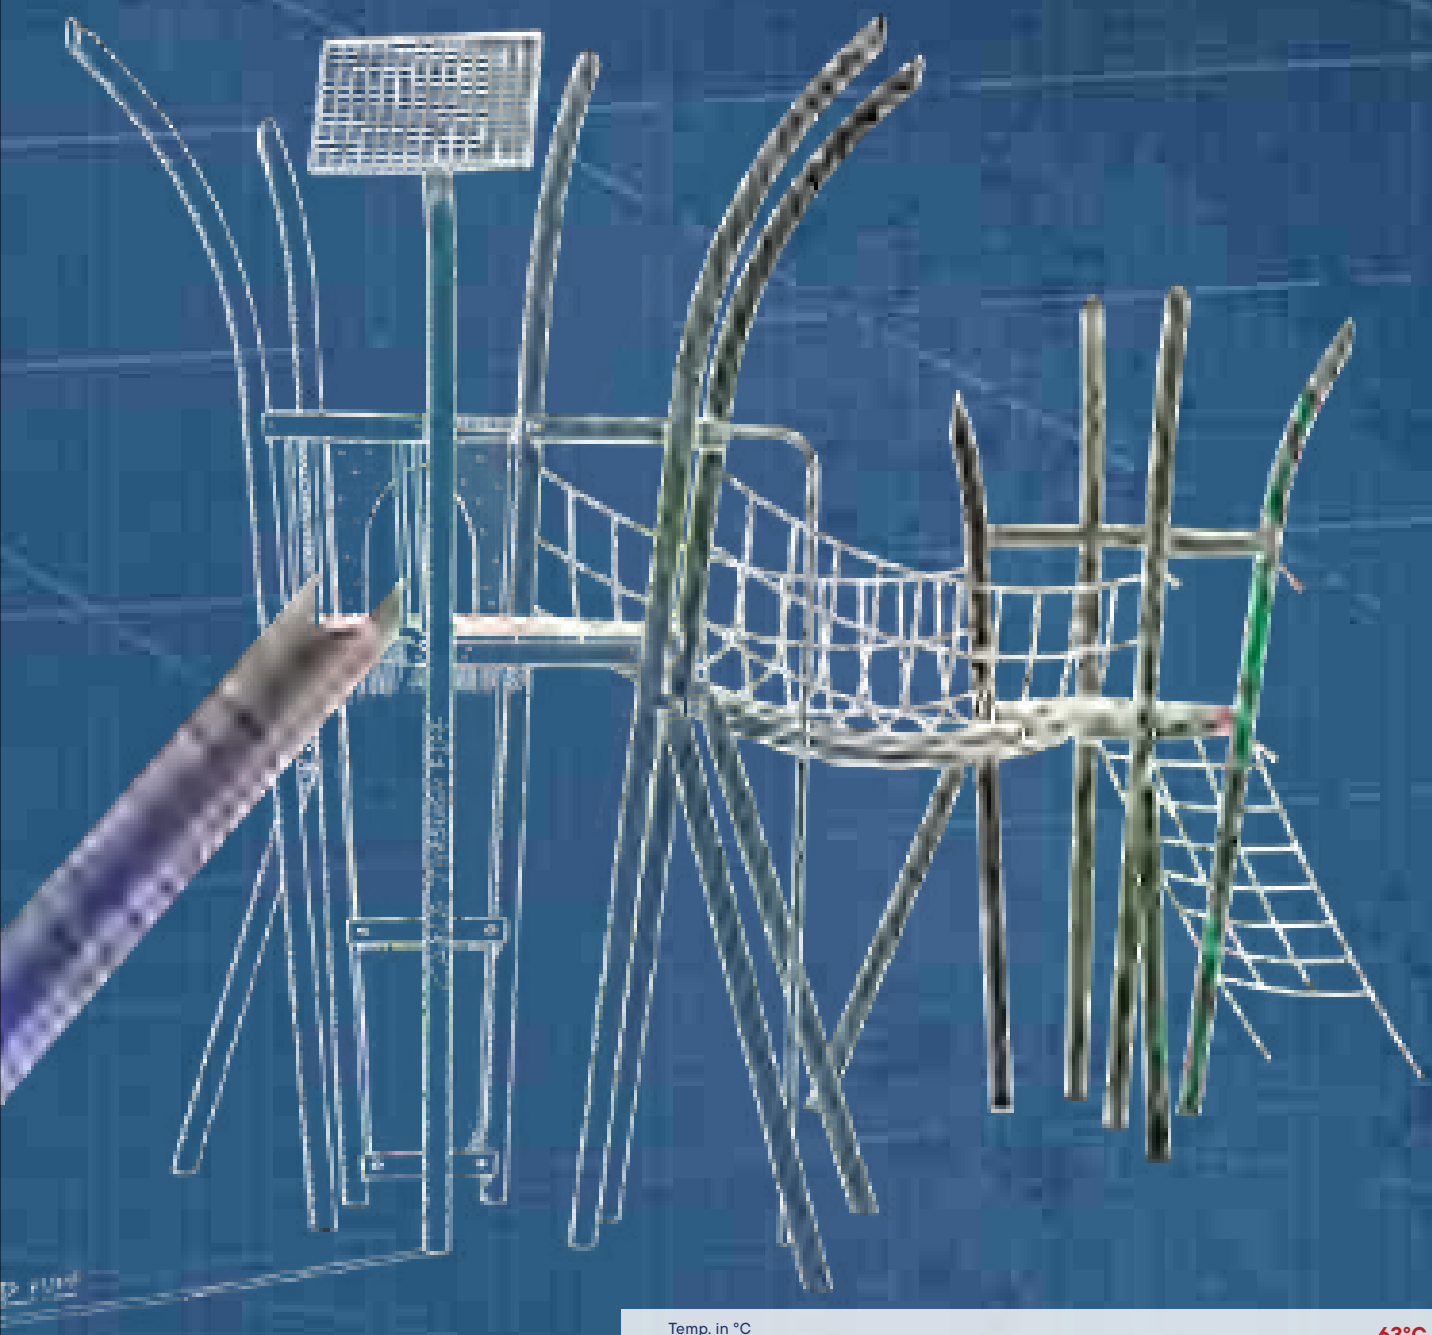

With this innovation, you're choosing greater comfort, more safety and more joy. Our cooled box slide ensures that children and adults alike can glide effortlessly even on the hottest summer days – for relaxed moments and happy visitors.

Advantages at a glance:

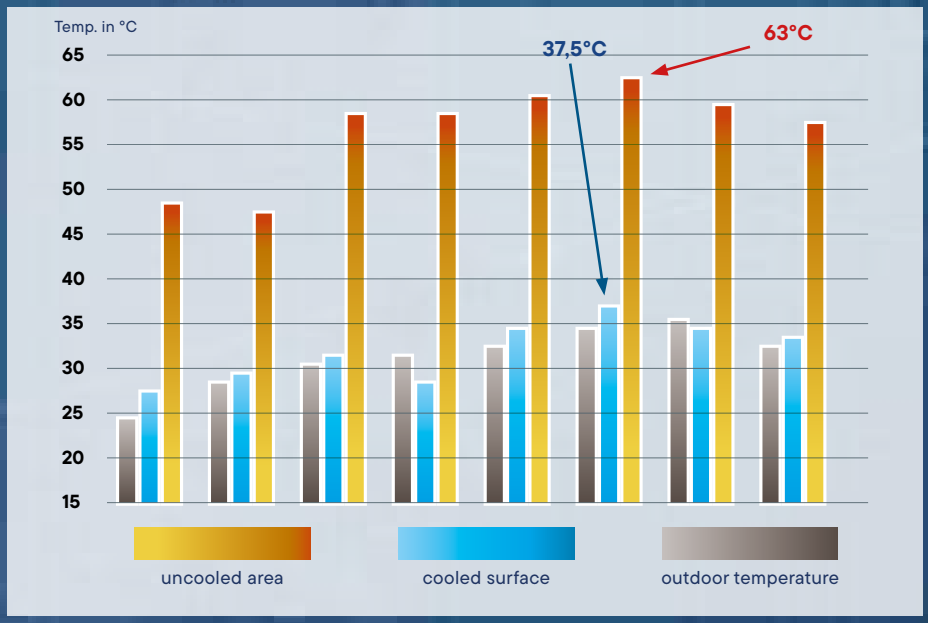

- Pleasant slide temperatures, even on hot summer days
- No additional energy source required
- Solar-powered & environmentally friendly
- Closed-loop system – no water loss
- Frost-proof in winter
- Long-lasting, low-maintenance technology

More details:

Our tests in August 2020 – the warmest month of the year – produced impressive results. At an outdoor temperature of 35 °C, the uncooled surface reached over 63 °C! The cooled section, on the other hand, remained at a refreshing 37.5 °C – only slightly above the outdoor temperature and that consistently throughout the entire month.

Climbing adventures for young and old

Climbing Product Line

Climbing, swinging, balancing — our versatile classics bring movement, excitement and motor challenges to every playground.

Climbing Product Line

Climbing is a fundamental part of child development — it strengthens coordination, strentgh and self-confidence in equal measure. Our classics such as horizontal bars, climbing combinations, rope landscapes and net structures offer versatile movement incentives for different age groups. Children can try things out, test their limits and find their own solutions. Variable degrees of difficulty create exciting challenges that appeal to both beginners and experienced climbers and motivate them in the long term.

Whether freestanding or as part of a larger play area, our climbing elements can be flexibly integrated into existing concepts. Different heights, grip variations and directions of movement promote balance, body tension and spatial awareness. At the same time, they create communicative meeting places where children can develop strategies together and strengthen their social skills. This turns every playground into a lively space for movement and adventure that combines sustainable development with long-lasting quality.

Imaginative adventures

Theme Worlds Product Line

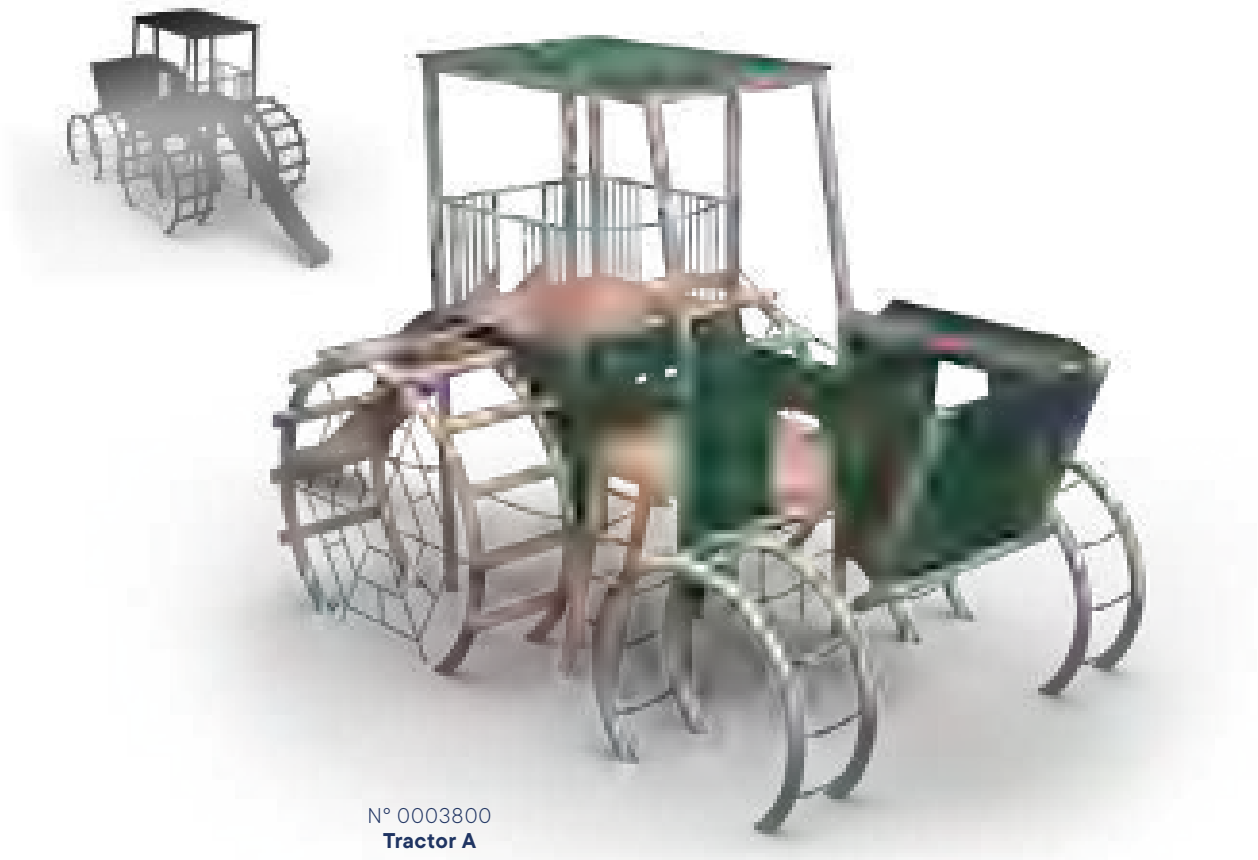

Play worlds that spark the imagination – our themed playground equipment transforms every area into a lively adventure full of stories.

Theme Worlds Product Line

Themed worlds open up spaces for children to use their imagination, role-play and develop creatively. Whether tractors, buggies, airplanes, dinosaurs, or elephants – our themed products take familiar images and transform them into walk-in adventures. By immersing themselves in different roles, children develop social skills, language skills and empathy. At the same time, the play options promote motor skills, balance and coordination in a playful way.

Theme-based products create identification and make playgrounds unique places of experience with recognition value. Children invent stories, slip into new roles and actively and independently shape their play. Different levels of difficulty and movement options ensure that different age groups can play together. This creates lively meeting places that combine imagination and movement and unite sustainable development with high-quality, durable construction.

More product lines in book #3

In our Book #2 “Products,” we provided you with a comprehensive overview of our proven design and play value lines — well-thought-out concepts, high-quality materials and creative solutions for modern play areas. However, our journey does not end there: in Book #3 “Fresh,” you can expect to see the consistent expansion of our product range. Here we present further product lines that set new trends and create fresh accents on every playground. Look forward to great highlights that act as real attractions, innovative fitness equipment for all generations and completely newly developed series that take functionality, design and play fun to a new level.

“Fresh” stands for inspiration, further development and the passion to constantly rethink play areas. In addition to impressive main attractions, you will also find smaller, perfectly coordinated additions that sensibly round off existing play areas and enrich their design. This creates individual play and movement landscapes with recognition value and lasting added value. Together, books #2 “Products” and #3 “Fresh” form our complete product range – a strong basis for your planning and implementation. Discover the diversity of our other lines now and be inspired by new ideas that make playgrounds even more lively, versatile and attractive.

More to discover

Book #2, “Products,” introduced you to our popular design and play value lines in all their diversity. But our book series goes even further: in the supplementary editions, you will gain insights into our company history, discover brand-new developments and experience the possibilities of customized special solutions — for even more design freedom in your projects.

Whether you want to learn more about our values, be inspired by fresh product ideas, or work with us to create extraordinary, tailor-made play spaces, our other books offer you the right depth of information. Keep browsing and discover the full spectrum of our ideas, expertise and possibilities.

#1 - company
This book chronicles our journey—from the initial ideas to the development of our own design studio to projects in over 22 countries. Get to know us and our values and let yourself be inspired.

#3 - fresh
We present our latest products, innovative designs, and exciting developments.
This book is for anyone who wants to stay one step ahead and is keen to incorporate fresh ideas into their projects.

#4 - custom
We open the doors to our creative studio: individual special projects, tailor-made solutions and unique designs take center stage here. Together with you, we develop spaces that perfectly match your vision — creative, distinctive and tailored to the needs of your users. Pure inspiration for special projects.
