Creating Dreams

Fresh

“There is surely nothing more sensible one can do in this beautiful world than to play.”
- Henrik Ibsen

About spielbau

For more than 30 years, we have been developing and manufacturing high-quality playground equipment in Brandenburg an der Havel – entirely at our company headquarters: from the initial design to delivery. Our international teams combine design, technology and craftsmanship with passion and expertise.

With great attention to detail, we create durable, safe playground equipment that is exported to over 20 countries worldwide. Each play structure is fully pre-assembled at the factory, technically tested and checked to the highest safety standards.

We strive to create unique play experiences through creative design, high play value and well-thought-out solutions that are tailored precisely to the needs of our customers.

In this process, we act in a resource-efficient and responsible manner—using sustainable materials, efficient manufacturing processes and a clear focus on quality, durability and environmental compatibility.

Our „Fresh“ catalog

In diesem Buch erwartet Sie die konsequente Erweiterung unseres Produktportfolios. Hier präsentieren wir Ihnen neue und erweiterte Produktlinien, die neue Impulse setzen und frische Akzente auf jedem Spielplatz schaffen. Freuen Sie sich auf große Spielhighlights, die als echte Anziehungspunkte fungieren, auf innovative Fitness-Geräte für alle Generationen sowie auf komplett neu entwickelte Serien, die Funktionalität, Design und Spielspaß auf ein neues Niveau heben.

„Fresh“ steht für Inspiration, Weiterentwicklung und die Leidenschaft, Spielräume immer wieder neu zu denken. Neben eindrucksvollen Hauptattraktionen finden Sie hier auch kleinere, perfekt abgestimmte Ergänzungen, die bestehende Spielareale sinnvoll abrunden und gestalterisch bereichern. So entstehen individuelle Spiel- und Bewegungslandschaften mit Wiedererkennungswert und nachhaltigem Mehrwert. Entdecken Sie jetzt die Vielfalt unserer Linien und lassen Sie sich von neuen Ideen begeistern, die Spielplätze noch lebendiger, vielseitiger und attraktiver machen.

Our philosophy – Where children‘s dreams begin

The team – our greatest strength
Behind every playground structure stands a strong team of more than 120 people: designers, engineers, carpenters, metalworkers and many others. They work hand in hand across departments – with passion, creativity and precision. Together, we bring projects to life in countries all around the world.

Experience you can see
For over 30 years, we have been creating playground worlds that are more than just equipment – they are places full of imagination, connection and movement. Our experience flows into every project and our service supports our customers before, during and long after completion.

Craftsmanship, not mass production
Every project begins with an idea – and becomes something truly unique. We design thematic concepts, combine play value with meaning and develop creations tailored to the customer’s vision and the specific site conditions. Our distinctive design language makes every playground feature a true eye-catcher with unmistakable character.

Safety you can trust
For us, safety is never an afterthought – it is the foundation of everything we build. Several certified playground inspectors oversee each piece of equipment from the initial offer through to the final inspection at our factory. The result: spaces where children can play freely and where parents and supervisors don‘t have to worry.

Passion in every detail
We believe that great playgrounds are born from a love of detail. Our designers and engineers combine smart, practical ideas with innovative solutions that surprise and delight. Every screw, every joint, every material is chosen with care – because small details make the biggest difference.

Quality that lasts for generations
Sustainable materials, robust construction and true craftsmanship – that’s our promise. In our own rope workshop, steel and wood production facilities and surface finishing department, we create playground equipment that is low-maintenance, easy to assemble and built to last. This ensures that play fun is not only guaranteed today, but also tomorrow – and for many years to come.

Everything under one roof
From the first sketch to the final screw – everything is created in-house. Short communication paths, close coordination and concentrated expertise ensure that visions become reliable realities.

Our mission - inspiring imagination
We want to make children’s dreams come true. Our playgrounds are designed to foster development, spark curiosity and inspire creativity. Because play is how children discover the world – and we want to nurture that spirit of discovery everywhere.
True to our motto: Creating Dreams.

spielbau
Creating Dreams

Our passion – your inspiration

Behind every playground we build lies our passion. We don't just create structures – we create worlds where children can laugh, explore and grow. Safe, inspiring and made to last.

We combine creativity with craftsmanship, creating designs that are recognized around the world. Because we believe that play is more than just pastime – it is the beginning of imagination, courage and community.

UN goals at spielbau

Our sustainability strategy is aligned with the UN Sustainable Development Goals (SDGs) and reflects our production- and innovation-oriented corporate profile, which is geared toward resource conservation, efficiency and regional cycles. The key areas of focus are “sustainable industry,” “social working environment,” and “climate-relevant production,” which guide our strategic and operational decisions.

We pursue a combined approach of consistency and efficiency. For us, consistency means continuously developing more environmentally friendly technologies and raw materials and promoting closed cycles throughout the entire product life cycle. Efficiency stands for the responsible use of resources and energy. We combine both approaches through the use of recyclable materials and modern manufacturing and production processes.

In addition, we promote equality and diversity through binding guidelines that firmly anchor inclusion and anti-discrimination within the company.

Learn more about our focus on sustainability in Book #1 “Company“

Our main focus areas of the UN Sustainable Development Goals (SDGs)

7.2
Significantly increase the share of renewable energy globally

8.3
Measures to create jobs and support businesses

10.2
Social, economic and political inclusion

11.3
Inclusive and sustainable urban planning

11.7
Universal access to safe and inclusive green spaces and public places

12.2
Sustainable management and use of natural resources

13.3
Creating awareness and capacity for climate protection

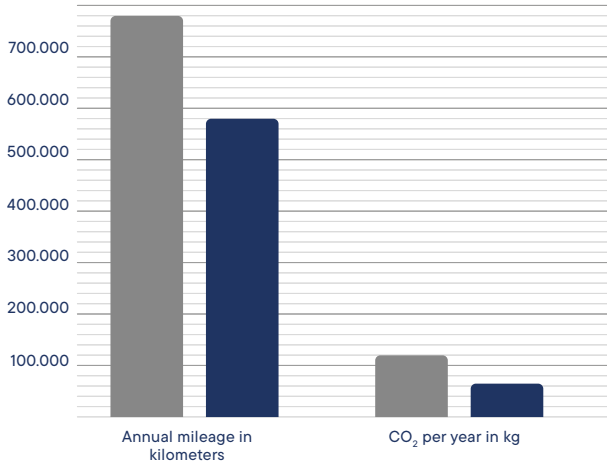

17.17
Formation of effective multi-participant partnerships

Premium materials for long-lasting play worlds

Selecting the right materials is essential for the quality, durability and safety of playgrounds. In our playground equipment, we consistently rely on premium-grade materials. Stainless steel forms the backbone of many of our products: its exceptional stability, weather resistance and low maintenance ensure that climbing towers, slides and structures remain reliable even under heavy use. At the same time, stainless steel allows for elegant, refined forms and precise connections that blend harmoniously into the overall design.

Robinia wood naturally complements these metal constructions. Naturally resistant to fungi and insects, it impresses with its exceptional hardness. As a wood in durability class 1 (very durable, over 25 years), robinia is one of the most resistant woods and is considered the most durable European wood species. Thanks to its natural ingredients, it is particularly suitable for outdoor areas and direct contact with the ground. Therefore, balustrades, platforms and balancing elements made from robinia wood can withstand years of intensive play without losing quality or safety. It also lends a warm, inviting appearance that enhances natural surroundings and appeals to both children and adults alike.

HPL panels complete the material portfolio. They offer versatile design possibilities, withstand UV radiation, moisture and mechanical stress and can be shaped into almost any form. Especially organic shapes – such as curved play surfaces or open book pages – are precisely realized with HPL. These are complemented by Hercules ropes, which create both functional connections and playful climbing or balancing paths.

The combination of these materials enables us to create sophisticated, durable and safe play worlds that meet the highest aesthetic and functional standards. Every element is designed for maximum stability and play value, without compromise in design or experience. The careful selection of materials ensures that children of all ages enjoy diverse opportunities for movement, sensory engagement and cooperation – all with minimal maintenance requirements.

Sustainability and Certified Quality
Our materials and production processes meet the highest environmental and quality standards. The BSFH quality seal guarantees tested safety and superior craftsmanship. With PEFC certification, we verify the sustainable sourcing of our robinia wood. The “Seal of rating for sustainability” documents our conscious use of resources across the entire production chain. Additionally, our playgrounds have been honored with the Brandenburg Environmental Award, recognizing eco-friendly, innovative and long-lasting playground concepts.

This combination of premium materials, thoughtful engineering and certified sustainability places our playgrounds among the leaders in modern playground design – robust, enduring and crafted to meet the highest expectations for aesthetics, safety and environmental responsibility.

- Flame retardant
- Easy to clean
- Made from kraft paper

Hercules rope

- Resilient and robust
- Four or six strands
- Spliced or with aluminum connectors

Colorful and diverse

Colors shape the atmosphere of a playground and have a direct impact on both children and adults. They can convey joy, calm, or excitement – influencing not only aesthetics, but also the overall play experience and quality of stay.
Colors create orientation, support thematic worlds and give every place its unique identity.

To make the design process easier, we have developed four color concepts for our Classic Line equipment, serving as both inspiration and a foundation for your choices.
The result is a harmonious overall image where functionality and color blend seamlessly – turning playgrounds into special places of discovery and experience.

Ocean

Fresh, cool tones with a maritime feel. This concept brings lightness and openness to playground design, creating an inspiring, airy atmosphere.

Sun

Vibrant, luminous colors full of energy and joy. This concept adds striking accents and turns playgrounds into bright focal points that instantly lift the mood.

Nature

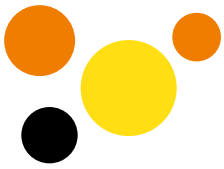

Soft, natural hues that blend harmoniously with greenery and landscape.
Perfect for playgrounds that radiate calm and closeness to nature.

Terra

Warm, earthy colors with a timeless appeal. They lend playgrounds a grounded, welcoming and authentic atmosphere.

Extensive color range

Our color range offers countless possibilities to combine shades and materials – from bold contrasts to harmonious transitions. This allows playgrounds to be designed individually and architectural features to be highlighted with precision. Well-thought-out color combinations give every project its own unique character.

Our high-quality powder coatings are available in a wide variety of tones and can even be produced as gradients with up to four colors. All reference numbers correspond to RAL tones, ensuring easy coordination with planners and architects. This provides the perfect foundation for creative ideas and visually as well as functionally outstanding results.

* Actual colors may vary - specifications are similar to RAL numbers. Special colors are available upon request.

Inclusion
Accessibility
Sensory experience
Connectivity
Social aspects
Movement experience

Planning for everyone

Inclusion is a fundamental human right and is firmly enshrined in the German Basic Law. With the UN Convention on the Rights of Persons with Disabilities, Germany has committed itself to enabling equal participation for all people – including on playgrounds.

This is where every child should be able to play, discover and have social experiences – regardless of their individual abilities. The new DIN/TS 18034-2 (since 2024) supports this requirement with an evaluation system that classifies playgrounds into three levels of inclusion based on accessibility, diversity and participation.

Inclusion goes far beyond the installation of individual special equipment. An inclusive playground is successful when it enables all children to play together – the aim is to create a play area that is diverse, barrier-free and interconnected.

Our playground concepts are based on the six criteria of the standard: access, connectivity, accessibility, sensory and movement experiences and social aspects. With the two-way and two-sense principle, clear guidance systems and a well thought-out design, we promote inclusion right from the start. Our self-explanatory icons make it easy to see which aspects a products covers, making planning more efficient and transparent.

A comprehensive range of sensory stimuli, opportunities for movement and social interaction not only ensures fun and games, but also genuine participation. The more criteria are met, the higher the playground‘s level of inclusion – from a solid start (level 1) to comprehensive inclusion (level 3). This turns a playground into a shared experience space – for all children.

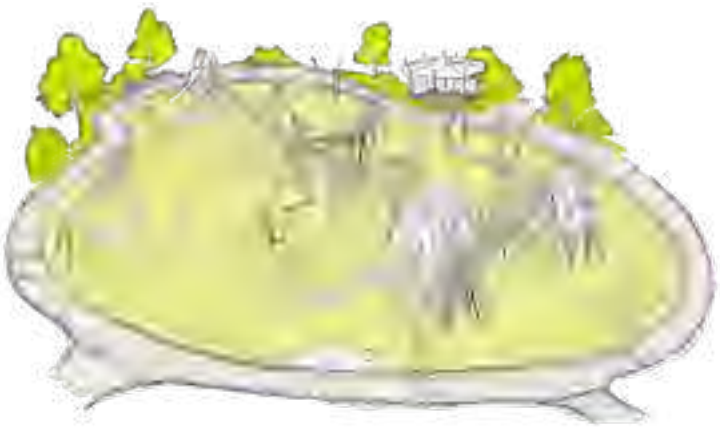

A successful concept

Our model playground shows how inclusion works in practice: barrier-free access, a wide range of movement options, sensory offerings and communicative spaces create an experience for all children.

DIN/TS 18034-2:2024 provides clear guidance for this by evaluating playgrounds according to accessibility and play options, thus enabling targeted planning. On this model, the playground equipment is arranged in such a way that children can play independently or together, regardless of any limitations.

It is particularly important to combine classic playground equipment with inclusive elements such as sand and water play, tactile surfaces, barrier-free swings and seesaws and communicative offerings. This creates a space where inclusion is not only formally fulfilled, but can also be experienced.

The model playground illustrates that true inclusion is achieved by linking different activities that involve all children equally and encourage them to play together.

Learn more about inclusion planning in Book #1 “Company”

Interplay of criteria

A - Barrier-free access

- Access to the playground with the help of the two-way and two-senses principle
- Basic requirement when planning an inclusive playground

B - Connectivity

- Access to the play stations in the play area
- Integration into the guidance system and accessibility with the help of the two-way and two-senses principle
- Basic requirement when planning an inclusive playground

Inclusion

C - Accessibility

- Barrier-free accessibility of the playground elements on site and to each other
- Differentiation between “independently usable” and “usable with assistance”
- Integration into the guidance system and accessibility with the help of the two-way and two-senses principle

D - Sensory experiences

- Explicit differentiation between 7 sensory experiences
- Evaluation of play opportunities based on senses addressed
- Seasonal play opportunities must be taken into account

level

E - Experience of movement

- Evaluation of the playground range in relation to 3 movement experiences
- Including perception of speed, height and coordination

F - Social aspects

- Opportunities to come into contact with each other
- Options for communication, perception or opportunities for encounters are being examined

Useful data for planning

In addition to names and order numbers, our product catalogues provide you with all the information you need about our playground equipment to help you plan your project.

Our information tables contain details on age groups, space requirements, play values and inclusion-promoting aspects to help you choose the perfect playground equipment.

Order-No.	Product name	Focus	Protection area Length	Protection area Width	Protection area Space	Fall height	Height	Play value / Inclusion
0000000	Playground Equipment	3+	123 cm	123 cm	123 m²	123 cm	123 cm	
		1	2	3	4	5	6	7	8	9

1 - Order number and product name

As part of our extensive digitisation and optimisation process, our most popular products have been given new, coordinated product names and individual order numbers. This information enables us to provide you with product information, documentation and quotations quickly and easily.

2 - Focus group

We stand for inclusion rather than exclusion, because our goal is to create playgrounds that offer something for everyone. For this reason, we do not strictly separate age groups and instead refer to focus groups – i.e. developmental stages of children for whom the respective playground equipment was designed. This information is intended as a recommendation and does not represent barriers based on numbers. Some of our products are not accessible to small children due to access filters and restrictions in accordance with DIN EN 1176 – but children develop differently and, in compliance with the standard, our playground equipment offers fun for every stage of development.

3 - Length of the protective area

This specification refers to the length of the area required for the playground equipment, including the minimum fall zone to be complied in accordance with DIN EN 1176. This is a guideline value that may vary depending on adjustments to the DIN standard or technical changes. We recommend that you always request a current quote with product information during the planning phase.

4 - Width of the protective area

This specification refers to the width of the area required for the playground equipment, including the minimum fall zone to be complied in accordance with DIN EN 1176. This is a guideline value that may vary depending on adjustments to the DIN standard or technical changes. We recommend that you always request a current quote with product information during the planning phase.

5 - Needed space

The area to be planned for the playground equipment in square metres. This is a guideline value that may vary depending on adjustments to the DIN standard or technical changes. We recommend that you always request a current quote with product information during the planning phase.

6 - Max. free fall height

Maximum free fall height for this playground equipment.

7 - Height

Refers to the maximum height of the playground equipment, not the platform height.
The platform heights of the playground equipment can be found on our data sheets.

8 - Play values

The most important goal of a piece of playground equipment is to combine fun and variety. With our information on the various play values, you will always find exactly the combination that children love:

9 - Inclusion

Fun for everyone is an important and essential principle in the planning of play areas. Each of our products promotes certain aspects of inclusion, which, when combined, create a play experience that offers everyone a space for discovery and excitement. These pictograms help you to use exactly the aspects of inclusion to develop your project into a play area that makes diversity visible and tangible. A list of all aspects of inclusion and achievable levels can be found on pages 18 and 19.
As sections A to C do not relate to individual play equipment but to play stations or the entire play area, fulfilment of these criteria is considered a basic requirement when planning.

Discover play worlds

Our themed play worlds feature thoughtfully designed combinations that are perfectly tailored to the environment and user group. Discover inspiring concepts, impressive designs and harmonious complete solutions that transform play areas into real places of discovery – and get fresh ideas for your next project.

Balance meets movement

Linie M

Colorful, playful and designed to encourage movement, Linie M enhances any play area with seesaws, spinning equipment and swings that immediately appeal to children and support their development through play.

Linie M

Our Linie M products are a colorful and playful addition to any play area. With small to large seesaws, spinning toys and swings, they offer a variety of movement activities that immediately appeal to children and constantly present new challenges. Balance, coordination and body awareness are developed through play, while swinging, spinning and seesawing simultaneously strengthen courage, self-confidence and social interaction. This creates lively play moments that combine fun, activity and shared experiences.

Our Linie M series also stands out for its high flexibility during the planning phase.
In some cases, selected products can even be installed without fall protection, which opens up additional design possibilities.

The following icons show not only the range of motion of the play equipment but also the various installation methods.

Motions:

- Tilt / Rock: back and forth
- Tilt / Rock: all around
- Rotating around its own axis
- Jumping: Up and down

Installation:

- Two installation options:
  - Loose fall protection, e.g. sand, bark mulch or similar
  - Flush with the ground in solid fall protection surfaces
- Installation possible without fall protection

Hexagonal climbing fun

Hexolino Design Line

With its striking, geometric design, our new Hexolino line creates versatile and colorful play areas that invite children to climb, explore and play together.

Hexolino Design Line

The characteristic hexagonal shape gives Hexolino a unique look and creates play spaces that immediately spark children's curiosity.
The playful design combines movement, orientation and the joy of discovery into a varied experience that is highly engaging. While climbing, balancing and navigating the elements, motor skills, coordination and body awareness are developed naturally.
At the same time, the open structures stimulate the imagination and invite children to constantly reinvent paths and freely develop new play ideas.

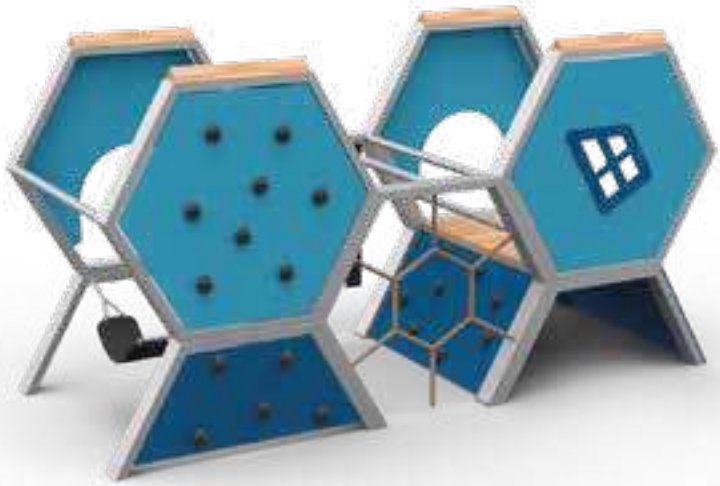

Hexolino stands out in particular for its versatile applications and design possibilities. The modular obstacle courses can be flexibly assembled and adapted to different spaces or requirements. This results in custom play structures for outdoor use as well as exciting solutions for indoor spaces, since the product line also includes indoor equipment.
With numerous combination options and high play value, Hexolino creates an inviting world of movement that children will want to explore again and again.

Individuelle Parcours

The Hexolino obstacle course system opens up new possibilities for creative play environments that offer a rich experience. Various individual modules in the distinctive hexagonal design can be flexibly combined to create diverse structures for any space. A variety of play elements—such as touching, turning or flipping—engage different senses and invite children to actively explore their surroundings. At the same time, the elements promote collaborative role-play and social interaction, creating lively meeting spaces that combine imagination, movement and togetherness in a playful way.

Thanks to the individual modules, every Hexolino course can be customized to fit your project and the available space. A variety of possible combinations ensures that new play opportunities are constantly created, continuously motivating children to explore. When combined with a wheelchair-accessible surface, the modules are also designed so that they can be used independently by wheelchair users. This creates inclusive play spaces that combine accessibility and diversity, enabling all children to share a varied play experience.

The geometric space-saver

TryAngle Design Line

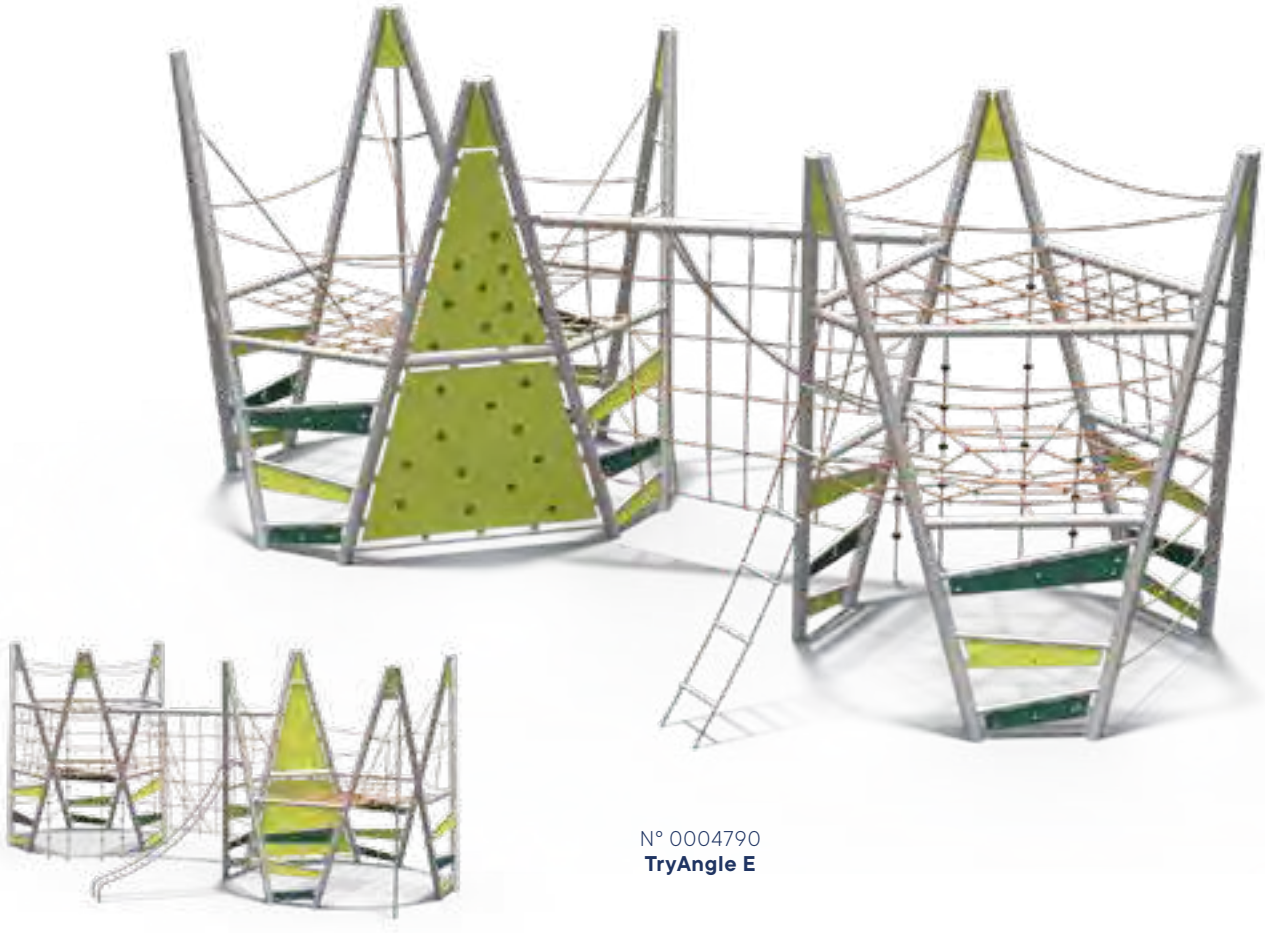

TryAngle brings a breath of fresh air to the playground: compact, modern and packed with play value, this line invites children to experience big adventures even in small spaces.

TryAngle Design Line

A clean design language, compact dimensions and a surprising amount of play value are what make TryAngle so appealing. The two-dimensional basic shape looks modern, open, inviting and immediately appeals to children. Strategic color accents create striking focal points without compromising the design's lightness. This results in play opportunities that encourage climbing, exploring and experimenting, while promoting movement, motor skills and imagination in a playful way.

In addition to its high play value, the product line also impresses with its well-thought-out functional qualities. The construction and design are engineered to ensure that transport, assembly and maintenance remain particularly practical and efficient. This simplifies planning and creates flexible application possibilities in a wide variety of play areas. With this combination of clarity, everyday practicality and child-friendly experiential quality, TryAngle becomes a modern invitation to move and explore.

Maximum design

Colours play a central role in the perception and effect of a playground. In our TryAngle design line, colour nuances are used specifically to create orientation, stimulate play and spark children's imaginations. Small accents and finely tuned details give the playground equipment character without overloading it. This creates play areas that appear lively and at the same time radiate calm.

Harmonious colour combinations promote comfort and support a coherent overall picture in the play environment. They help to visually integrate playground equipment into their surroundings and clearly structure different play areas. Our four carefully developed colour schemes offer reliable orientation and make it easier to select suitable combinations – for individually designed playgrounds with a balanced colour effect.

Ocean

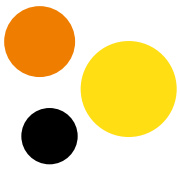

Fresh, cool tones with a maritime feel. This concept brings lightness and openness to playground design, creating an inspiring, airy atmosphere.

Sun

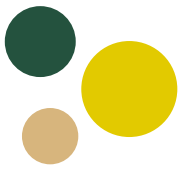

Vibrant, luminous colors full of energy and joy. This concept adds striking accents and turns playgrounds into bright focal points that instantly lift the mood.

Nature

Soft, natural hues that blend harmoniously with greenery and landscape.
Perfect for playgrounds that radiate calm and closeness to nature.

Terra

Warm, earthy colors with a timeless appeal. They lend playgrounds a grounded, welcoming and authentic atmosphere.

High up into adventure

Up & Higher

Outstanding adventures at new heights: Up & Higher play towers captivate with unobstructed views, plenty of action and endless fun—higher, more exciting, unforgettable!

Up & Higher

When play structures rise high into the sky, they create a special fascination that children can hardly resist. With our towers, Up & Higher creates impressive play structures that are visible from afar and immediately invite children to climb, explore and marvel. Every ascent becomes a little adventure that awakens courage, curiosity and a love of movement, giving children the satisfying feeling of surpassing themselves step by step.

In addition to the experiential value, the height also offers many educational opportunities. Climbing helps develop coordination, body awareness and motor skills, while the different levels stimulate spatial awareness and spatial reasoning. This creates distinctive play areas that not only define the outdoor space but also provide children with enriching physical and social experiences.

When climbing becomes a competition

Ninja Frame Design Line

Ninja Frame creates action-packed obstacle courses that test strength, agility and endurance, motivating children and teenagers to take on new athletic challenges time and time again.

Ninja Frame Design Line

Action, excitement and athletic challenges define the unique appeal of Ninja Frame. Dynamic climbing sections invite users to test their agility, strength and endurance time and again — alone, in a team or in a playful competition.
Each element is designed to create fluid, exciting sequences of movement that spark ambition while offering a strong incentive to move.
Thus, every section becomes an active experience reminiscent of the fascination of well-known obstacle courses, motivating children and teens to join in.

The individual elements can be flexibly combined to create courses of varying lengths and difficulty levels — from compact sequences to demanding challenges. Straight paths, varied routes or challenging obstacles can be individually planned. This creates versatile activity spaces for different age groups that combine physical development with creative play and constantly invite participants to try new rounds.

Ninja Frame Challenge C in Stendal

A systematic approach to creating your own obstacle course

On your marks, get set, go! Our Ninja Frames combine movement, coordination and the thrill of competition into a flexible system that adapts to any environment. Thanks to their well-designed modular construction, you can create custom obstacle courses that can be tailored precisely to your needs in terms of shape, size and difficulty. Whether you have a compact space or a sprawling area—every project becomes a custom solution that delights users and keeps them motivated in the long term. This turns every idea into a dynamic experience with maximum design freedom while offering the highest quality and safety.

This concept is complemented by our extensive range of vibrant powder coatings, which give every frame a distinctive look. From subtle tones to eye-catching colors, you can set specific accents and highlight the character of your playground. Haven't found a suitable course? No problem! We support you from the initial idea through to implementation and work with you to plan your custom Ninja Frame precisely, efficiently and exactly according to your vision. Quality, durability and maximum flexibility are always at the heart of our solutions.

As unique as your project

Dynamic and lively

Motion Product Line

Movement sparks small play opportunities with a big impact: cable cars, seesaws and movable elements invite children to experiment, explore and get active.

Motion Product Line

Whether it's gentle rocking, energetic gliding, or small, movable play elements—this product line brings dynamism and variety to any play area. Cable cars, seesaws and complementary movement elements create opportunities that immediately appeal to children and encourage spontaneous activity. Balance, coordination and body awareness are promoted through play, while at the same time the joy of movement, courage and self-confidence grow. In this way, even small additions create lively play moments that are highly engaging.

The versatility of the elements is particularly valuable. They can be used specifically as supplements and enrich existing play areas with additional incentives for movement. This creates varied options for different age groups and needs—from a quick activity in between to a more intense play experience. In this way, the product line combines functional additions with genuine play value and allows children to experience movement in everyday life in ever-new ways.

Swinging fun for all ages

Swings Product Line

Swings are timeless classics of the playground, inviting children to experience movement, freedom and the sensation of flying time and time again.

Swings Product Line

Hardly any piece of playground equipment appeals to children as directly as the swing. The gentle push, the rhythmic swaying and the sensation of height and lightness have made swings an integral part of lively play areas for generations. Swings invite children to test their limits, build courage and experience movement with all their senses.
At the same time, they create moments of calm as well as exuberant play sessions full of joy and energy.

In addition to their high experiential value, swings also offer many educational benefits. They promote balance, coordination and body awareness and help children consciously perceive and control their movements. Whether alone, side by side or playing together—swings create bonding experiences that enrich the play area and inspire excitement time and time again. Thus, a simple movement becomes a play activity with lasting fascination.

Wiggling with style

Spring Rider Product Line

With their playful designs and charming details, our spring riders invite children to swing, rock and explore—crafted from stainless steel or handmade wood.

Spring Riders Product Line

With their playful shapes and lovingly crafted details, spring riders immediately appeal to children and encourage their first independent experiences with movement. The gentle bouncing, rocking and swinging playfully promote balance, coordination and body awareness while instilling confidence in movement. This creates small moments of play with a big impact that stimulate the imagination, spark joy and continually offer children new incentives to explore.

The spring riders also showcase their unique character through their materials and design. The combination of stainless steel, HPL seats and hand-sawn robinia wood blends durable quality with an appealing, high-end aesthetic, harmoniously integrating into various play areas.
Thus, every spring rider becomes an inviting play option that delights children and enriches the playground with active, child-friendly experiences.

Ready for the workout

Calisthenics Product Line

Calisthenics combines modern training with a clean design: robust equipment and individual components enable a wide variety of bodyweight exercises and encourage active movement.

Calisthenics Product Line

Training using one's own body weight is at the heart of this product line, combining athletic challenges with low-barrier access to exercise. Developed in collaboration with athletes and physical education professionals, our calisthenics products offer versatile and functional training options. A variety of exercises promote strength, coordination, flexibility and endurance, appealing to both beginners and advanced users. Attractive color schemes give the equipment a modern, motivating look.

The coordinated elements are based on the DIN 16630 fitness standard and can be used as a complete system or flexibly in circuit training. Comprehensive training instructions at each station make the equipment easy to use and ensure the exercises are immediately understandable.
At the same time, the product line stands out for its material quality: robust, durable and vandal-proof constructions ensure that the equipment remains reliable and ready for use even with intensive use.

Stylish and appealing

Our calisthenics equipment impresses not only with its functionality and durability, but also with its wide range of design options. Choose between glass-bead-blasted surfaces for a minimalist look or a high-quality powder coating in single- or multi-color finishes. Through the strategic use of accent colors, you can create custom designs that blend harmoniously into any environment or serve as deliberate visual highlights.
The result is a training facility that is not only high-performance but also visually appealing and perfectly reflects your requirements.

Special attention is paid to the design of the support posts, which feature different surface finishes depending on the color selection.
Powder-coated in classic anthracite, they feature an elegant matte finish, while accent colors are enhanced with an elegant satin-gloss effect.
This combination of function and design gives you maximum freedom in planning and implementing your fitness park. Together, we'll develop a cohesive color concept that makes your calisthenics area unique while guaranteeing the highest quality and durability.

Single-color
Stainless steel, glass blasted

Single-color
Anthracite grey (RAL 7016)

Color change
Stainless steel, glass blasted and anthracite grey in alternation

The right exercise for every workout

Our calisthenics equipment was developed and continuously optimized in close collaboration with athletes, fitness influencers and sports educators. The result is well-designed training solutions that provide targeted support for both beginners and advanced users. Our equipment is tested in accordance with the fitness standard DIN EN 16630 and meets the highest safety and quality requirements. In this way, we create a reliable foundation for effective training in public spaces and offer users a well-designed system that combines performance, functionality and trust.

In addition, we have developed practical training instructions for each piece of equipment—ranging from simple exercises to challenging workouts. Illustrated graphics show movement sequences, intervals and the muscle groups targeted, allowing each user to customize their workout. The instructions are affixed directly to the equipment as stickers or, optionally, provided as custom-designed signs in A3 or A2 formats. Supplementary signs featuring exercises without equipment are also available, providing a comprehensive rounding out of the training concept.

Creative movement with meaning

Our Word Play product line uniquely combines play, movement and learning. The climbable letters invite children to get active while playfully discovering language. Whether with round or square posts, the elements adapt flexibly to a wide variety of environments and offer diverse design possibilities. Thanks to high-quality powder coating, they impress not only with their robust quality but also with their colorful, durable appearance, which enhances any play area. This creates vibrant spaces where creativity and movement take center stage.

The educational value is particularly noteworthy: children learn letters and numbers, form words, and, in the process, further develop their motor skills. However, the greatest strength lies in individuality—you can design your own words and thus create unique play worlds that perfectly match your concept. Whether names, terms or initials, there are virtually no limits to creativity. This makes every project a distinctive highlight. Of course, we are here to advise you during the planning phase so that together we can develop the ideal solution for your project.

We'd be happy to help you plan your Word Play.

More product lines in Book #2

Book #3, “Fresh,” introduced you to our latest ideas, innovative additions and fresh inspiration for modern play and recreation areas. If you’d like to explore the full range of our proven solutions, take a look at Book #2, “Products.” Together, both catalogs form a comprehensive foundation for planning versatile, high-quality and customized projects.
While “Fresh” opens up new perspectives, “Products” showcases the full range of our established product world—well-thought-out, proven and visually compelling.

In Book #2, you’ll find our popular design lines such as GrasArt, Mikado and Frame, which inspire with their clear design language and high recognizability. The range is complemented by inspiring themed worlds as well as classic playground solutions such as climbing structures, sand and water play features, which have stood for play value and quality for years. In addition, the portfolio also includes functional road and park equipment as well as stylish pavilions for outdoor relaxation. This gives you a complete overview of all possibilities—and the perfect foundation for designing your project holistically and individually.

More to discover

With Book #3, “Fresh,” you’ve experienced the evolution of our product portfolio and discovered new ideas for modern play and activity spaces. But our book series goes even further: In the companion volumes, you’ll gain insights into our company history, discover proven design and play value concepts and explore the possibilities of custom solutions—for even greater creative freedom in your projects.

Whether you want to learn more about our values, draw inspiration from established product lines or work with us to create extraordinary, custom-designed play spaces—our additional books offer you the right depth of information. Keep browsing and discover the full spectrum of our ideas, expertise and possibilities.

#1 - company
This book chronicles our journey—from the initial ideas to the development of our own design studio to projects in over 22 countries. Get to know us and our values and let yourself be inspired.

#2 - products
In our product catalog, you will find a wide selection of high-quality playground equipment, described in detail and clearly presented. A reference work that combines quality and variety—for safe, durable and inspiring play areas.

#4 - custom
We open the doors to our creative studio: individual special projects, tailor-made solutions and unique designs take center stage here. Together with you, we develop spaces that perfectly match your vision — creative, distinctive and tailored to the needs of your users. Pure inspiration for special projects.
